ABBREVIATIONS USED

- P - Professional posts
- GS - General Service posts
- C - Consultants
- IRA - Inter-Regional and/or Regional Advisers funded from Part V of the regular budget
- XB - Extra-Budgetary resources (Resources, including technical and non-technical, expected to be available from sources outside the regular budget, e.g. Special Fund overheads; Trust Funds, etc.)
- R - Recurrent projects
- NR - Non-Recurrent projects
- C - Continuing projects (e.g. World Economic Survey; Statistical Yearbook, etc.)
- N - New Projects
- Priority A - Projects of high priority
- Priority B - Projects of priority
- Priority C - Projects of lesser priority

1. DEPARTMENT/OFFICE: ECA
2. PROGRAMME: Executive Direction and Management
3. ORGANIZATIONAL UNIT RESPONSIBLE: Office of the Executive Secretary,
including Information Services
and Sub-Regional Offices
4. DEFINITION OF PROGRAMME, BASIC AIMS AND OBJECTIVES:

1. Office of the Executive Secretary

The Executive Secretary, as the head of the ECA secretariat, has responsibility for the planning, direction and co-ordination of all activities undertaken by the secretariat. He is assisted in this task by the Deputy Executive Secretary, the Secretary to the Commission and other officers, including the Programme Co-ordinator, who services the Programme Committee and assists the Executive Secretary and the Deputy Executive Secretary in the formulation and implementation of the programme of work and priorities and the regional programme of technical assistance, ensuring their proper relationship with the ECA budget. Activities for which the office is directly responsible include servicing the sessions of the Commission, following up the implementation of resolutions of the Commission and other United Nations bodies, maintaining relations with member States, specialized agencies and other inter-governmental and non-governmental organizations, and liaison with Headquarters. The office also has special responsibilities in connexion with the activities of sub-regional offices, the African Institute for Economic Development and Planning, the information services and the servicing of the Policy Committee.

2. Information Services

The general responsibilities of the Information Services are to help publicize the work and aims of ECA through feature articles, press releases, brochures and other documents, radio and television coverage, newsreel and press photographic services etc. An information bureau is maintained, educational and reference material is provided, and guided tours are organized.

3. Sub-Regional Offices

Each sub-regional Office has a Director, one other professional staff member and appropriate supporting staff. Additional staff are detached from the Secretariat Headquarters for service in sub-regional Offices for long or short periods as required.

5. LONG-TERM PLAN:

See above.

6. WORK PROGRAMME:

See consolidated statement attached.

Not applicable.

1. DEPARTMENT/OFFICE: ECA
2. PROGRAMME: I - Economic Development Planning
 - A. Economic Development Planning, Projections and Policies
3. ORGANIZATIONAL UNIT RESPONSIBLE: Research and Statistics Division^{1/}
Economic Research Section
4. DEFINITION OF PROGRAMME, BASIC AIMS AND OBJECTIVES:

The major substantive responsibilities of the ECA secretariat involve research, studies and analysis of outstanding questions pertaining to development planning; preparation and publication of sub-regional economic and social surveys; analysis of country development plans; studies on various selected problems of African development and problems of economic harmonization at the sub-regional and regional levels; studies dealing with analytical and empirical aspects of long-term economic projections; analysis of country development plans so as to draw the attention of national governments to the weaknesses in planning structures; and, co-ordination of research activities of various institutes in Africa in the areas of economic and social development.

5. LONG-TERM PLAN:

To secure their development targets, most of the African countries have prepared plans into which to fit their economic and social policies and render their efforts at development effective.

Nevertheless, it has been observed that from 1960 to 1966, at least, the average annual growth of GDP in Africa falls below the 5 per cent rate fixed for the first United Nations Development Decade, and that a great deal still remains to be done in plan preparation and implementation, if the hopes for progress in economic and social development are to be fulfilled.

The main obstacles to plan implementation are as follows:

- the targets are not always realistic and consistent;
- project identification is often inadequate or incomplete;

- the political and social structures are unsuitable for the present circumstances;

Consequently the secretariat's work programme aims at:-

- helping to improve plan preparation and the supervision of development plan implementation;
- helping to standardize concepts and methods to facilitate the exchange of experience from one country to another and make it possible to compare results;
- specifying the special circumstances required for planning in Africa;
- sustaining effort in economic co-operation to secure sufficiently large markets, and so promote industrialization and economic and social development.

See draft Annotated List of Projects for 1969/1970 with Projections to 1973 enclosed.

1. DEPARTMENT/OFFICE: ECA
2. PROGRAMME: I - Economic Development Planning
B. Economic Co-operation
3. ORGANIZATIONAL UNIT RESPONSIBLE: Trade and Economic Co-operation
Division
Economic Co-operation Section

4. DEFINITION OF PROGRAMME, BASIC AIMS AND OBJECTIVES:

The basic aims and objectives adopted by the ECA to promote economic co-operation in Africa are to initiate and participate in measures for facilitating concerted action for the economic development of Africa; including its social aspects, with a view to raising the level of economic activity and levels of living in Africa, and for maintaining and strengthening the economic relations of countries and territories of Africa, both among themselves and with other countries of the world.

5. LONG-TERM PLAN:

The countries in each of the four sub-regions have taken the first steps towards closer economic co-operation at the sub-regional level. But although the initial phase of the task of promoting multi-national economic co-operation in Africa is completed and the idea has now been generally accepted, the specific measures of co-operation have yet to be elaborated. With a view to assisting African governments in this field, the work programme is formulated to facilitate the following main, broad lines of action:

- African countries will now have to set up or strengthen their multi-national machinery within which they can discuss and take decisions on their collective policies and projects;
- an essential part of the multi-national machinery should be a civil service to advise on and promote their joint undertakings;
- African countries should agree on, and find the material means for, implementing a number of concrete development projects which increase economic contacts between their countries.

UNDP has indicated its willingness to give assistance in the form of "country programmes" (as in the case of the East African Community); Special Fund "mini-projects" (as in the case of the West African Community and the East African Community) and from contingency funds (as in the case of the Maghreb Community). It would seem therefore, that the time has come when ECA should limit itself to meeting requests from the multi-national agencies for studies to be undertaken and for specific expert assistance to be given in connexion with the holding of meetings and the implementation of their programmes.

Apart from the providing for the meeting of such requests, the ECA programme in this field will, therefore, be aimed at enlarging and consolidating existing economic groupings, extending their fields of operation and developing machinery for economic co-operation.

2. Programme: II - International Trade
3. ORGANIZATIONAL UNIT RESPONSIBLE: Trade and Economic Co-operation Division¹: Trade Section
4. DEFINITION OF PROGRAMME, BASIC AIMS AND OBJECTIVES:

The programme calls for the collection, analysis and dissemination of information on the sub-regional intraregional trade situation; studies and reports on international trade developments and intraregional trade problems and policies with a view to promoting sub-regional and intraregional trade; documentation for and servicing of working parties; the provision of advisory services on request; the promotion of training and the maintenance of regular liaison with organizations working in these fields.

5. LONG-TERM PLAN:

The main tasks in the field of trade during the quinquennium are two-fold:-

- to follow up the possibilities of developing and expanding intra-African trade resulting from opportunities created by developments in industry, agriculture, transport and natural resources, and in particular those produced by closer economic co-operation among developing African countries;
- to participate in the endeavours to rationalize the world trading system so as to ensure that the specific and legitimate requirements of African countries in this development are fully taken into account.

Within this general framework the secretariat will follow developments in trade and commercial policy of African countries, and of non-African countries in so far as they may have an incidence on the economic growth of African countries, analyzing the main problems, formulating proposals for their solution and assisting in the design of means for the implementation of such proposals. In particular the secretariat will establish a regional Trade Promotion Centre for Africa to contribute to the United Nations Export Promotion Programme as proposed by a meeting of Executive Secretaries of the Regional Economic Commissions in January 1967 and endorsed by the Economic and Social Council in Resolution 1362 (XLV).

1. DEPARTMENT/OFFICE: ECA
2. PROGRAMME: III - Industrial Development
3. ORGANIZATIONAL UNIT RESPONSIBLE: Industry and Housing Division^{1/}:
Industry Section
4. DEFINITION OF PROGRAMME, BASIC AIMS AND OBJECTIVES:

The major substantive responsibilities in the field of industrial development are as follows:

(a) To prepare an industrial strategy for Africa on a sub-regional and regional basis; to provide criteria for identifying viable industrial project and their logical order, in relation to one another and to projects in other sectors, especially transport, energy and agriculture; and to lay down basic principles and objectives of a rational sub-regional industrial programme which will be carried out for the mutual benefit of all the participating countries;

(b) To build up an inventory of existing industrial establishments in Africa and to prepare reports on industrial trends in Africa, including the industrial situation, progress and problems in individual countries;

(c) To undertake pre-feasibility studies of individual industries on a country, multi-national and sub-regional basis and, where appropriate, on a regional basis;

(d) To undertake, in co-operation with other United Nations bodies, feasibility and engineering studies as a follow-up of the pre-feasibility studies, and organize feasibility teams for each major branch of industry, the studies to be carried out within the framework of co-ordinated sub-regional and regional industrial development programmes; the feasibility studies will be followed by negotiations for investment and construction studies and the setting up of industries;

(e) To study standards in current use in African countries, together with procedures for widening the scope of standardization, either within each country or on a sub-regional or regional basis;

(f) To encourage, in co-operation with other divisions and sections of the ECA secretariat and with the appropriate departments of the United Nations and the specialized agencies concerned, the development of technological and managerial education and training through appropriate African institutions;

(g) To sponsor, in co-operation with other divisions and sections of the ECA secretariat, the appropriate departments of the United Nations and the specialized agencies and operating bodies concerned, institutes or centres for applied industrial research in Africa, where possible on a sub-regional basis.

5. LONG-TERM PLAN:

As a result of studies and surveys carried out by the ECA secretariat during the last five years, some of the major obstacles to industrialization have been identified. The most serious constraint is the small size of national markets in terms of population and of income per head. This imposes a limit on the extent to which African countries can produce manufactures economically, especially intermediate and capital goods. Other important obstacles are the shortage of technical know-how and entrepreneurial skills; non-existence of a complex of supporting machinery and institutions such as public and business administration, effective industrial promotion centres, and procedures for co-ordination industrial legislation and incentives.

Specific action is required therefore to establish links between national markets and to harmonize industrial development programmes of groups of countries. This will help the growth of facilities for the production of intermediate and capital goods. It is also expected that co-operation will benefit the growth of import substitutes which have to compete against large-scale production complexes in foreign countries.

It is in this framework that the work programme for the next five years has been established.

1. DEPARTMENT/OFFICE: ECA
2. PROGRAMME: IV - Development of Natural Resources
3. ORGANIZATIONAL UNIT RESPONSIBLE: Natural Resources and Transport
Division: Natural Resources
Section

4. DEFINITION OF PROGRAMME, BASIC AIMS AND OBJECTIVES:

In the field of natural resources the principal aims are:

- (a) To organize known data on the natural resources of the region, including the protection and preservation of records;
- (b) To assist Member States to build up competent manpower and establish effective machinery for the exploration, measurement, evaluation and management of natural resources;
- (c) To assist Member States to determine their natural resources endowment through the work of joint centres for specialized services in surveying and mapping;
- (d) To collaborate with UNESCO and with other United Nations specialized agencies and with other agencies granting bilateral aid for the implementation of the Lagos and Toulouse plans;
- (e) To evaluate the prospective needs for, and the availability of, natural resources for export and for domestic consumption.

Particular emphasis is placed on the development of national services to undertake the tasks involved and while this capacity is being developed, direct assistance is provided by the secretariat in the exploration, measurement and evaluation of their resources.

5. LONG-TERM PLAN:

The utilization of Africa's natural resources is crucial to development. Increased supplies of energy are basic to industrialization, to meet the needs of agricultural modernization and to expand transport networks. The development of water resources is essential to agricultural improvement and expansion, industrial development, the production of hydroelectric energy and the improvement of water transport facilities.

Exploration and exploitation of mineral resources are essential both to increase exports to earn foreign exchange and to develop a sound base for industrialization. The development of cartography is essential for the exploration and exploitation of natural resources, for agricultural development, for making decisions on the location of industry, for building up transport networks and for proper physical planning.

The problems involved are:-

- lack of knowledge about the natural resources of Africa;
- lack of trained manpower and inadequacy of institutional facilities to undertake the tasks involved in exploration for, and evaluation of natural resources;
- inadequacy or lack of mechanisms for integrating natural resources planning into development planning;
- inadequate familiarity with technological and economic developments affecting the exploration, evaluation trade in or domestic utilization of natural resources.

Any planned expansion of work in natural resources exploration and exploitation requires an improvement in work in surveying and mapping on both a national and multi-national basis. The case for multi-national collaboration in natural resources work rests not only on the unevenness of the distribution of populations in relation to the physical size of the African countries and on the consequent need to plan self-sustaining industrialization on a multi-national basis but, also on the increasing sophistication and costs of modern methods of exploration, evaluation and exploitation.

This factor obliges the Secretariat to place great weight on the creation or strengthening not only of national but also of multi-national machinery and institutions for designing and implementing effective programmes for accelerated work on natural resources. This is of particular importance in view of the rapidity with which science and technology is changing the scope of the concrete definition and altering the relative value of specific forms of natural resources with serious consequences for individual African countries.

During the coming decade African and other developing countries will be faced with several very grave and urgent problems in this field. Foremost among these are likely to be the economic impact of exploration and exploitation of mineral resources of the deep sea, the problems of resources of the continental shelf in relation to the definition of territorial waters, international action for the protection of the biosphere. It is for these reasons that the Work Programme places emphasis on the building of African capability not only in exploration and evaluation of natural resources for domestic use or for exports, but also in policy-making and planning.

1. DEPARTMENT/OFFICE: ECA
2. PROGRAMME: V - Transport and Communications
3. ORGANIZATIONAL UNIT RESPONSIBLE: Natural Resources and Transport Division/
Transport and Communication Section

4. DEFINITION OF PROGRAMME, BASIC AIMS AND OBJECTIVES:

The programme aims at the development of all modes of transport essential to the economic integration of Africa. For its implementation, the Transport and Communications Section has the following major responsibilities: (a) to conduct surveys and make studies of all modes of transport, telecommunications and tourism; (b) to assist Member States to build up competent manpower by training technical and administrative personnel; (c) to provide advisory services to Governments on request; and (d) to review and evaluate government requests for assistance from UNDP, specialized agencies, other organizations and bilateral donors.

5. LONG-TERM PLAN:

The development of a national economy in most African countries is hampered by the lack of transport and communications facilities. This is even more true in economic relations with neighbouring countries. Transport links are therefore essential for expansion and integration of national and multi-national markets and for ensuring adequate outlets for the products of industrialization and agricultural improvement.

The development of tourism to which many countries look as a source of foreign exchange earnings also depends on the availability of facilities which permit free movement to and within countries.

Although individual African countries are investing more than 25 percent of their national budgets on improvement and extension of their transport and communications system, external help and effort are urgently needed, inter alia because:

- the existing transportation links were designed to meet the needs of overseas trade and were not intended to serve long-term development on a regional basis;
- of the lack of adequate numbers and quality of scientific, technological and managerial personnel for handling transport development programmes.

The work programme in this field is therefore designed to:

- identify the missing transport links between the countries and amongst sub-regional groups of countries;
- forecast the demand for transport facilities in the light of expected growth in the different sectors of national and regional economies;
- make a comparative cost analysis of the different modes of transport which could affect trade between countries;
- recommended the choice of mode or modes of transportation that are best suited to present and foreseeable needs;
- determine the region's quantitative and qualitative needs for manpower in transportation with a view to establishing a Regional Transport Institute for the training of higher transport officials, especially at the managerial level; and,
- set up inter-governmental working groups to examine transport problems, to propose solutions, and to promote the development of integrated transport systems.

African countries still have not enough direct telecommunications links between themselves. Recently, Niger has been able to establish links with Dahomey, Upper Volta and Mali. The latest link is that established, with the help of UNDP, between Ethiopia and Ivory Coast.

The Commission, in association with ITU is promoting a programme of an African telecommunications network. The problems which African Governments face are costly routings, delays and general unsuitability of existing systems for the development needs of their countries, individually and collectively.

In most African countries, tourism is a new enterprise. In many places the basic infrastructure - hotels, roads, transport, game-parks, etc. - have not been developed. The work in this field, therefore, aims at the development of direct tourist services as well as supporting attractions.

3. ORGANIZATIONAL UNIT RESPONSIBLE: Trade and Economic Co-operation
Division¹: Fiscal and Monetary
Affairs Section
4. DEFINITION OF PROGRAMME, BASIC AIMS AND OBJECTIVES:

The substantive responsibilities with regard to fiscal and financial questions are:

- (a) To collect, analyse and disseminate information on the monetary and banking, fiscal and general financial situation in the African region;
- (b) To prepare studies and reports on aspects of the fiscal and financial problems of the region;
- (c) To promote, with the help of international agencies and other bodies concerned, monetary, financial and banking co-operation in the African region;
- (d) To maintain regular liaison with organizations working within these fields;
- (e) To provide necessary documentation to the working parties on monetary management and to other meetings;
- (f) To promote training in the relevant fields with the aid of international and bilateral agencies;
- (g) To provide advisory services to Governments upon request.

5. LONG-TERM PLAN

Now that planning machineries have been set up in most of the African countries for accelerating their rates of growth, the need for proper harmonization of fiscal and budgetary procedures and policies with development planning is being greatly felt as this is vital to ensure the successful implementation of the plan. The budget as an instrument for the allocation of resources is the financial medium for the

implementation of the plan. Despite the need for close link between budgeting and planning, it has been observed that in practice often weak and inadequate. The individual projects and schemes included in the plan do not often spell out all the financial implications, e.g. foreign exchange component included in total cost, annual recurring expenditure after completion, breakdown of costs by major items, sources of financing envisaged and estimates of annual income from operation of project, etc. There is therefore urgent need for establishing firm procedures for the formulation, scrutiny and approval of development schemes so that such lacunae are removed. There is also urgent need for improving the budgetary classification system to make it more meaningful for economic policy formulation and the techniques for revenue forecasting have to be developed so that proper emphasis is placed on increasing mobilization of domestic resources for development. Increased inflow of foreign resources also generates pressures for the mobilization of additional local resources needed for utilizing foreign assistance. The increasing cost of debt servicing also imposes additional burdens every year. The taxation and fiscal structure of the different countries have therefore to be geared to the task of meeting these additional demands.

Reform of the taxation structure to bring it in line with development requirements of different countries and to gradually broaden its base in line with progressive principles of taxation and giving incentives for investment is also long overdue. As agriculture is still an important sector of the economy in most African countries, the system of taxation of agriculture needs to be reformed. An overall study on patterns of financing in different African countries would bring into focus new areas which could be tapped for raising additional revenues and better tax administration.

There is not only need for studies in depth on budgetary and fiscal problems but also the necessity for discussing these problems widely in Seminars and Conferences so that proper awareness is created for the solution of these problems.

The tasks in the field of banking and monetary questions have to be related to the new stage of development in African countries where account should be taken of growing emphasis on the development of neglected areas within the countries themselves and of economic co-operation at the sub-regional level. Hence two kinds of problems call for special attention: improvement of banking infrastructure and economic incentives needed for development and elaboration of some sub-regional patterns for payments or clearing arrangements necessary for trade liberalization between the countries of the sub-region concerned.

The secretariat will further service the Association of African Central Banks until the technical secretariat to be established by that organ will be in a position to take over the major part of the research work on question involving increased co-operation among African Central Banks.

See consolidated statement attached.

See draft Annotated List of Projects for 1969/1970 with Projections to 1973 enclosed.

1. DEPARTMENT/OFFICE: ECA
2. PROGRAMME: VII - Agriculture
3. ORGANIZATIONAL UNIT RESPONSIBLE: ECA/FAO Joint Agriculture Division^{1/}
4. DEFINITION OF PROGRAMME, BASIC AIMS AND OBJECTIVES:

The programme aims at promoting agricultural development in countries of the region and to this end provides for: the collection, analysis and dissemination of information; the formulation of projects which encourage the modernization of agriculture; research and economic studies with a view to assisting governments in agricultural production, trade, marketing and utilization of agricultural products; advisory services, upon request; the maintenance of regular liaison with FAO on all activities of the two organizations in the economic and social fields, with respect to African agriculture; and, co-operation with other specialized agencies and bilateral programmes.

5. LONG-TERM PLAN

Although agriculture occupies a dominant position in the overall economy of Africa, the progress of the agricultural sector in most African countries has been rather slow. Agricultural production is hardly keeping pace with population growth, and food production, in particular, is falling short of the demand for higher consumption and better nutrition standards.

The structure of agriculture in the Continent is dominated by a subsistence pattern of production and a general low level of productivity. A number of factors have contributed and are contributing to this unhappy state of affairs among which the following may be quoted:

- lack of technical knowledge and of the know-how of modern means of production as a result of slow progress in research, and a failure to place such technical knowledge as is available at the disposal of producers for application at the field level.

- a low level of infrastructural and institutional services to agriculture;
- low levels of application of production inputs;
- a general lack of awareness of waste in handling, marketing and storage, as well as wasteful habits of consumption of agricultural produce;
- inadequate planning, and plan implementation;
- a general lack of awareness of possibilities of regional co-operation in agricultural production and trade.

The agricultural programme of the Economic Commission for Africa must aim at improving this situation by assisting Member States in the rational development of their agricultural resources to enable production to meet domestic demand for food and other agricultural commodities and external market demand.

The policy for such a programme must stress:

- stimulation of production in both the traditional and modern sectors, in line with internal and external market demands, and flow of production from national to larger sub-regional and world markets - (See in particular Project No.1);
- application of modern techniques and improved means of production;
- improvement of infrastructural and institutional services to agriculture through increased extension of advisory credit, marketing and transport facilities to producers and adoption of land reform policies;
- improvement of data collection and supply of commodity and other relevant production, consumption, and trade data planning organizations;
- modernization of agricultural education and training.

Working for the achievements of these aims and objectives is, in the first place, the responsibility of national governments and should be provided for in national development plans. The programme of the Economic Commission for Africa must, however, provide for assisting governments in the identification of socio-economic factors influencing progress of agricultural development, in developing physical and human resources and in mobilizing financial resources. These objectives demand the assessment, in each country, of:

- existing capital goods, including livestock and inputs such as fertilizers, selected seeds and insecticides;
- present level of application of technical know-how;
- the level of existing education and extension personnel and facilities;
- existing social and traditional methods and institutions such as those pertaining to the land tenure systems;
- credit and the credit mechanisms available for its application;
- the nature and availability of research facilities for control and development of programmes and projects;
- presence of adequate basic infrastructure, including administrative organization;
- level of housing, sanitation and nutrition;
- current progress in development planning with respect to food and agriculture.

The programme of work should take account of the long-term strategy and perspective for overall African agricultural development aimed at in the FAO's Indicative World Plan effort.

The new understanding between the ECA and FAO Secretariats that there should be one UN agricultural programme in Africa and that the FAO Regional Conference will constitute the sole UN forum for discussions of the strategy of agricultural development in Africa holds bright hopes for effective co-operation between the two Organizations towards modernization of the agricultural sector.

Team	1970	1971	1972	1973	1974	1975	1976	1977	1978	1979	1980	1981	1982	1983	1984	1985	1986	1987	1988	1989	1990	1991	1992	1993	1994	1995	1996	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041	2042	2043	2044	2045	2046	2047	2048	2049	2050	2051	2052	2053	2054	2055	2056	2057	2058	2059	2060	2061	2062	2063	2064	2065	2066	2067	2068	2069	2070	2071	2072	2073	2074	2075	2076	2077	2078	2079	2080	2081	2082	2083	2084	2085	2086	2087	2088	2089	2090	2091	2092	2093	2094	2095	2096	2097	2098	2099	2100

(*) Includes 48 man-months supplied on a regular basis by FAO

Notes (1) Man-months marked with one or two asterisks are rough estimates. More accurate requirement could be worked out only after completion of Phase I and its clearing with FAO and the governments involved.

(2) The requirements in man-months are based on the following assumption:

1969	14	1
1970	14	1
1971	14	1

DEPARTMENT: ECA DATE: 30 November 1968

ORGANIZATIONAL UNIT JAD

(DIVISION) RESPONSIBLE: JAD

LISTING OF PROJECTS AND SUB-PROJECTS PLANNED FOR IMPLEMENTATION
AND RELATED REQUIREMENTS EXPRESSED IN TERMS OF MAN MONTHS

Note: For the purposes of this listing, a project is defined as a component part of a programme which contributes a specific end-product within a set time-limit, towards the objectives of the programme.

SECTOR VII : AGRICULTURE

PRIORITY A (Specify if A, B or C)

BRIEF DESCRIPTION OF PROJECTS	R/ NR	C/ N	LEGISLATIVE AUTHORITY	EXPECTED DATE OF COMPLETION	1969 REQUEST			1970 REQUEST			1971 PROJECTION		
					REGULAR BUDGET			REGULAR BUDGET			REGULAR BUDGET		
					P	C	IRA	P	C	IRA	P	C	IRA

(3) The Planned number of man-months, in 1969 however does not correspond exactly to the number of staff members multiplied by 12.

The following difference could be observed :

Number of staff members x 12 168
Planned man-months 153
Difference 15

This difference is meant as an allowance for the experienced delays in recruitment. The man-months planned are not man-months of 20-22 working days but only of about 16-18 working days since provision is made for annual leaves, sick leave, etc.

(4) As far as the General staff is concerned it is assumed that the Division will provide secretarial facilities for all Phase II and Phase III Teams. General staff man-months are not specified according to particular projects.

x = G.S. staff not sub-divided between projects

1. DEPARTMENT/OFFICE: ECA
2. PROGRAMME: VIII - Human Resources Development

A. Social Development

3. ORGANIZATIONAL UNIT RESPONSIBLE: Human Resources Development
Division:
Social Development Section

4. DEFINITION OF PROGRAMME, BASIC AIMS AND OBJECTIVES:

(a) To promote greater participation of rural manpower (including youth and women) in local and national development, through rural development, community development, co-operatives and other forms of mutual aid associations;

(b) with respect to training, to assess African manpower needs and resources in the field of social work and social administration; to assist in establishing sub-regional training centres for social work; and to undertake a long-term programme for the training of instructors in social work and for the specialized training of administrators, professionals and technical staff responsible for the organization and operation of social welfare programmes;

(c) to undertake interdisciplinary surveys of socio-economic problems in the development and improvement of rural life and rural institutions, including making studies of agrarian structures, rural resettlement and land reform measures, nutrition and health extension, co-operatives, marketing systems and other rural institutions likely to strengthen the income resources and security of rural families;

(d) to engage in studies of social problems encountered by African Governments in cities and localities undergoing rapid industrialization;

(e) to undertake comparative and country case studies of patterns of national social welfare programmes, including planning, organization, administration, etc., and to publish monographs on studies and investigations undertaken.

5. LONG-TERM PLAN:

The pace of agricultural and industrial development in the region is seriously hampered, not so much by scarcity of capital and natural resources as by the forces of African social tradition, coupled with a complex of rigid human factors. Rigid property structures and land tenure systems, in certain cases, are rendering futile the efforts of Governments to achieve more equitable distribution of income. Inflexible customs and philosophies of traditional life continue to act as a brake on the introduction and acceptance of social change and modernization.

Most of the transformation which has so far taken place in the social structure has been due more to the sheer force of contemporary political, economic and demographic factors than to deliberate action. Increased physical and social mobility have tended to uproot the individual from the settings of the traditional family and home community. New factors of social stratification have super-imposed themselves upon the traditional ones, on the basis of western-type education, occupation, personal wealth and political status. There is thus an emergence of new forms of wealth, power and social standing, which provide new criteria for competition and social value. They also provide a new basis for social conflict between the traditional and modern elements in the society. A conservatism of the rural sector contrasts with the active and new economic interests of the fast rising cities.

Advanced mechanization and technological processes have been introduced in parts of the region. Vast hydro-electric schemes and irrigation dams are being introduced into areas of tradition-bound peasants.

The nature of social development programmes sponsored by African Governments has tended to reflect more the differences in the

1. DEPARTMENT/OFFICE: ECA
2. PROGRAMME: VIII - Human Resources Development
 - B. Manpower and Training
3. ORGANIZATIONAL UNIT RESPONSIBLE: Human Resources Development
Division: Manpower and Training
Section
4. DEFINITION OF PROGRAMME, BASIC AIMS AND OBJECTIVES:

The work programme in manpower and training is concerned with the co-ordination of the Commission's training activities; research, studies and surveys on manpower educational and training requirements; stimulation of demand for the training of Africans; and collaboration with interested Specialized Agencies and other Organizations providing training facilities for Africans. The central aim and objective of the programme is to encourage, stimulate, advise and assist Member States to train their nationals and to plan the mobilization of their human resources for the implementation of economic and social development plans, through both national action and multi-national and/or sub-regional action.

The Manpower and Training Section co-ordinates specific bilateral training and fellowship programmes as well as co-ordinates, and advises on the training programme of the Commission's secretariat. It also acts as a clearing house for information on manpower development and on training opportunities, and as a centre for the identification, assessment and evaluation of Africa's manpower and training needs in relation to the Commission's development strategy. It undertakes educational studies related to economic and social development objectives and manpower needs. It prepares other studies and special reports and carries out surveys which provide a rational basis and documentary material for advising Member States, at their request, on the provision and development of training facilities, the establishment and development of national machinery for manpower planning and training co-ordination and on the evaluation of manpower programmes. It organizes training courses for African manpower planners and administrators of national training

programmes, including trainers. It services the Commission's Sub-Committee on Training which advises the Executive Secretary on the Commission's training policy and programme. It collaborates with the ILO, UNESCO, UNITAR, IDEP and the Organization of African Unity in matters relating to manpower, education and training in an effort to foster programme harmonization at the regional level.

5. LONG-TERM PLAN:

The secretariat continues to co-ordinate bilateral scholarship and fellowship offers channelled through the Commission and assists with the implementation of the annual in-service training programme of the Economic Commission for Europe, and UNITAR's group training programme in technical assistance for African officials. Two training courses in manpower planning and training programming have been organized. It has participated in, and contributed working documents for a number of international meetings in its field of competence and has undertaken a number of studies and surveys in the field of manpower, education and training. It has compiled a Roster of African Specialists willing to offer their services to African countries other than their home countries. An attempt has been made to identify the trained manpower requirements, by categories and types, for the implementation of industrial development programmes in East and West Africa.

For the period 1969-71 further intensified action will be taken on all the foregoing activities. Advice will be given to Member States, at their request, not only in the field of manpower planning, but also on the policy and strategy for evolving co-ordinated programmes of human resources development and utilization. Efforts will be made to achieve an effective inter-agency collaboration and concerted action in the field of training for development. Particular attention will be devoted to evolving, and securing resources for an African Scholarship and Fellowship Fund for training and research in specialized fields, the training of trainers, the promotion of sub-regional centres for training and research on human resources and to collaboration with the Organization of African Unity in promoting the establishment of specialized African institutions for training and research.

1. DEPARTMENT/OFFICE: ECA
2. PROGRAMME: VIII - Human Resources Development
C. Public Administration
3. ORGANIZATIONAL UNIT RESPONSIBLE: Human Resources Development
Division¹ :
Public Administration Section
4. DEFINITION OF PROGRAMME, BASIC AIMS AND OBJECTIVES:

The programme in public administration is intended to assist countries of the region in improving their administrative systems. The programme is implemented through the publication of guides, manuals and brochures, through conferences, seminars and training courses; and advisory services, upon request, on all aspects of administration.

5. LONG-TERM PLAN:

An adequate level of administrative competence must be regarded as a pre-requisite to planning and development as well as to orderly and effective government. While emphasis is given to projects and tasks designed to assist in achieving the main objectives of the Commission, viz. agricultural development and industrialization, any of the efforts in the field of public administration must be directed, as in the past, to the improvement of administrative potential in general, as part of the infrastructure necessary for effective planning and, in particular, plan implementation.

The difficulties of African administration are of several kinds:

- scarcity of middle-grade administrators; insufficient training of certain senior civil servants for their responsibilities; lack of young university graduates, specialists and technicians in the public service;
- inadequacy of the structures and procedures of the central administrative organs for the tasks of preparing, supervising and carrying out development programmes; the problem here is one of reform, organization and management;

- in French-speaking countries, the absence of local administrative institutions adequate to ensure the participation of the rural population in the carrying out of plans or the failure of experiments tried; in the English-speaking countries, the failure to adapt the system of local government to this same objective. The reforms needed in this area relate to the elaboration of a new administrative strategy at the local level, which in turn would lead to the establishment of new institutions.

In general, the solution to these broad categories of problems should be looked for in a rational framework of "ends and means" which would result in African administration being adapted to the needs of development. "Administration for Development" is therefore the general theme which will dominate work in this area in the quinquennium 1969-73.

* Proposed

- 1/ The staff requirements for the direction of the Division are included under "Social Development".
- a/ Mr. van der Wielen, Associate expert, has been considered as a professional staff member for the proposals of man-month calculations. His period of assignment will end on 12.5.69.
- b/ One of the Regional Advisers is supplied by the UPU in connexion with the Study of Postal Facilities in Africa.
- c/ Includes one GS provided by technical assistance funds.
- d/ It is hoped that, in addition, one Regional Adviser will be supplied by UPU in connexion with the Study of Postal Facilities in Africa; if so, all his time will be devoted to this task.
- e/ Includes 4¹/₂ months of Mr. van der Wielen, Associate Expert.
- f/ It is expected that delays in recruitment will reduce the available man-months by 6 in 1969.

enclosed.

1. DEPARTMENT/OFFICE: ECA
2. PROGRAMME: IX - Population Programmes
3. ORGANIZATIONAL UNIT RESPONSIBLE: Research and Statistics Division^{1/}
Demography and Social Statistics
Section

4. DEFINITION OF PROGRAMME, BASIC AIMS AND OBJECTIVES

The basic aim of the programme is to encourage countries to undertake demographic censuses and surveys and to set up organizational arrangements for collection and processing of vital statistics data; to devise recommendations for improving the methodology in these fields; to assist specialized and other agencies in the field of social statistics (health, education, etc.); and to undertake analyses of such data and prepare studies on demographic and social levels, trends and projections in Africa.

5. LONG-TERM PLAN

In connexion with population projects, mention should be made of the activities on population analysis, divorced as far as possible from statistical data, methods and studies on population which come under statistical programmes.

During the five-year period, most of the censuses and demographic surveys for 1970 will have been completed, and it will then be possible to:

- get an up-to-date picture of the demographic position in Africa;
- draw the necessary conclusions for the countries in the region;
- study the influence of the various factors on demographic changes in the African countries;
- undertake studies which will help in the preparation and planning of economic and social development policies in Africa.

1. DEPARTMENT/OFFICE: ECA
2. PROGRAMME: X - Housing, Building and Physical Planning
3. ORGANIZATIONAL UNIT RESPONSIBLE: Industry and Housing Division^{1/}:
Housing Section

4. DEFINITION OF PROGRAMME, BASIC AIMS AND OBJECTIVES:

The work programme in the field of housing, building and planning involves the preparation of documents for and the servicing of various United Nations bodies dealing with the subject; studies arising out of the decisions of such bodies; the planning of programmes of advisory services to governments and substantive support for technical co-operation and technical liaison with United Nations Headquarters, regional economic commissions, specialized agencies and other organizations active in the field.

5. LONG-TERM PLAN:

Inadequate housing in both rural and urban areas continues to be one of the main problems facing African countries. This is the result of a complex set of demographic and socio-economic factors, many of which are interdependent and reflect the general level of development.

Population growth in Africa is estimated at 2.4 percent per annum. Urban population is growing at 5 percent per annum. The amortization of capital, the interest serviced, the expenditure on maintenance and repairs, and the cost of management, are some of the problems to be solved, in order to maintain and repair dwellings, preserve existing stocks, improve obsolete dwellings, and provide additional houses. The present level of building costs is high. A major component of costs is building materials and components; studies made by the secretariat indicate that materials and components constitute about 50 to 60 percent of house-building costs. There is little or no development in the building materials industries, where activity in domestic production is for the most part limited to the exploitation of natural resources and to the use of bulk supplies of building materials such as gravel, lime, bricks and a certain amount of timber.

Planning machinery is still weak in most countries. Housing policy is generally not integrated into economic development planning and the allocation of resources is in most cases on an ad hoc basis.

Specific action, therefore, necessary, on the provision of cheaper dwellings, re-examination of financial policy, reduction of costs, and production of adequate raw materials.

The place of housing must be determined as a function of economic development. The objective of policy should be to choose between housing programmes which have the greatest accelerating effect on the provision of satisfactory dwellings in both urban and rural areas.

Since the completion of the studies and surveys that led to the publication "Housing in Africa", the secretariat has been in a position to establish priorities and provide advisory services to governments on action-oriented measures. The Programme of Work and Priorities in this sector is, therefore, largely geared to operational activities.

1. DEPARTMENT/OFFICE: ECA
2. PROGRAMME: XI - Statistical Services
3. ORGANIZATIONAL UNIT RESPONSIBLE: Research and Statistics Division;^{1/}
Development and Training Section;
National Accounts and Financial
Statistics Section; and General
Statistics Section

4. DEFINITION OF PROGRAMME, BASIC AIMS AND OBJECTIVES:

The general responsibilities of the units concerned with statistical services are:

(a) To provide substantive secretariat services for the Conference of African Statisticians and other United Nations conferences and meetings on statistical matters in Africa;

(b) To provide advisory services to African Governments in the establishment of national statistical services and to assist in formulating country technical assistance arrangements and in briefing experts;

(c) To establish and implement regional training programmes in statistics and demography;

(d) To undertake research and prepare documentation for seminars and working groups of experts and to consider the adaptation of international standards to Africa in co-operation with the Statistical Office of the United Nations and the specialized agencies;

(e) To establish a system for the exchange of information on statistical activities and methods among African countries;

(f) To make the Mechanical Unit established at the Commission's headquarters available for research and demonstration purposes, for servicing countries without equipment or with insufficient processing capacity and to prepare reports on developments in data processing;

(g) To compile and analyse statistical data required for publications and for projects of other Divisions of the secretariat, and to prepare statistical handbooks containing a detailed analysis and evaluation of data assembled in various fields of statistics.

5. LONG-TERM PLAN

Since regional meetings on statistics began to be held in Africa, substantial improvements have been registered in the organization of statistical services, the preparation of surveys and statistical data and the training of statisticians in the region. Nevertheless, much still remains to be done to bridge the gap in the statistical information available in the African region.

In this respect, the work programme makes provision for assistance so far given to African countries to be continued, the object being to:

- improve the quality of statistical data;
- expand the area of available data;
- increase the number of statisticians;
- standardize concepts and methods in current use in the region;
- establish a system for the exchange of information;
- collect data and undertake comprehensive surveys designed to further the preparation and planning of economic and social development policies.

1. DEPARTMENT/OFFICE: ECA
2. PROGRAMME: XII - Science and Technology
3. ORGANIZATIONAL UNIT RESPONSIBLE: Natural Resources and Transport
Division¹: Science and Technology
Section
4. DEFINITION OF PROGRAMME, BASIC AIMS AND OBJECTIVES:

The Science and Technology Section was established in December 1966. Its major functions are:

(a) To serve as the focal point for United Nations activities undertaken at the regional level for promoting and applying science and technology to development;

(b) to promote co-operation among member bodies within the region concerned with the development of science and technology;

(c) to ensure that programmes for science and technology reflect genuine African needs and priorities;

(d) to consult with and assist governments and institutions on the most effective and economical means of promoting science and technology as instruments of accelerating structural change of the African economies and societies;

(e) to secure the interest and support of aid-giving institutions for programmes in science and technology at the national and multi-national level.

5. LONG-TERM PLAN:

To focus its programmes in the spheres which are considered to have the highest priority, the policy has been adopted to concentrate the efforts of the Commission during the next decade on the promotion of industrialization and the modernization of agriculture.

Industry provides the equipment and the consumer goods which constitute the material basis for a higher standard of living.

Promoting industrialization is a complex endeavour which includes such activities as development organization of markets, the establishment of plants using appropriate technology for the production of capital and consumer goods, the provision of basic raw materials to these plants either by importation or by exploitation of the natural resources of the region and finally the creation of an adequate infrastructure to supply water and power and to provide communication and transport. The realization of all these tasks in the developed countries has been made possible by the advances made in science and technology and the application of the knowledge in these fields to the solution of human wants.

Agriculture provides the raw materials for food and fibre. Increase in the supply and improvement in the quality and variety of foodstuffs are necessary to maintain existing levels of living standards in a growing population. To ensure an improvement in living standards, the food supply will need to expand much faster than the population and hence the productivity of agriculture must be raised. This is why agriculture in Africa has to be modernized. By modernization we mean, apart from other improvements in marketing and distribution, the application of science and technology to the various operations in farming.

The connexion between the modernization of agriculture and the application of science and technology is just as direct as it is for industrialization. It is through scientific research that man has been able first to determine and then to manipulate the relationships between the inputs into farming and the yield in terms of more and better crops and livestock. It is also through the application of science and technology that improved methods of storage and handling and, where necessary, new methods of processing have been developed to enable more people to enjoy the benefits of increased production.

Industrialization and modernization of agriculture will involve the acquisition of a considerable range of scientific expertise and technology, and the dissemination of this knowledge in usable form within the economy. This can only be effectively done by the education and

training of the necessary manpower. Hence a major priority for the African countries is the development of the human resources required to apply science and technology.

In addition to procuring existing scientific knowledge and technology, many countries in Africa will also need to develop a considerable amount of new technology to enable them to utilize their natural resources and to provide a solution to production problems which are peculiar to their environment. Hence the next priority after the development of human resources for science and technology is the creation of an infrastructure of institutions for research and development, to promote the discovery of new knowledge and the adaptation of existing technology to the solution of peculiar or local problems.

In the advanced countries, many of the activities necessary to provide the needs just stated arose from isolated initiatives. Hence it took several centuries to create the existing networks of institutions and organizations that produce the scientific and technical manpower and form the foundations of modern industry and agriculture. Recently, spectacular progress has been made by the same countries through conscious planning of the use of science and technology to promote economic growth and other development activities.

For the African countries, the necessity to plan consciously for the use of science and technology is inescapable, if the modernization of Africa is to take place in less than geological time. It is therefore imperative that the various Governments develop capability within their administrative systems for policy making and planning in science and technology in a similar way to what has been provided for other sectors of the national life.

The ECA's role in the development of Africa has been set as one of assisting the member countries to build up their economies and in particular to develop the capability to eventually solve most of their own problems. In doing this, ECA is expected to carry out studies and surveys to elucidate the development needs of the African countries and to make inventories of the resources of all types which exist and which must form the basis for any programmes of action. From the results of such studies and surveys, advice can be given on necessary policies and programmes.

In another context, the ECA is also available to assist member States in planning programmes to satisfy several needs, whether for the creation of organization, for development of manpower or for the establishment of institutions.
