

# COUNTRY PROFILE

## Quarterly update

July 2016

## Introduction

The main purpose of this document is to update the country profile for Egypt, with emphasis on annual data recently published for 2015.

## Recent social and economic developments: Highlights

- The prospects for the Egyptian economy in 2016 give grounds for prudent optimism. They depend partly on the Government's ability to respond to popular expectations and efficiently implement the strategy for sustainable development and macroeconomic reforms.
- Economic growth continued to fall back during the first half of the 2015/16 financial year. However, it is expected to accelerate as a result of renewed confidence on the part of investors, even though global economic trends continue to have an impact on economic activity.
- The budget deficit continued its downward trend during the first half of the 2015/16 financial year, reaching 11.2 per cent of GDP. 1
- The reforms under way should enable the country to resolve the problems posed by low-level and non-inclusive growth and the effects of population growth through sustainable urban development.

## Economic performance

### Economic growth

Growth in real GDP slowed during the first half of the 2015/16 financial year, to 4.5 per cent instead of the 5.8 per cent recorded during the first half of the 2014/15 financial year. However, a full-year analysis indicates that this rate was 4.2 per cent for 2014/15, up from 2.2 per cent in 2013/14. Although the rate slowed during the period in question, economic activity was stimulated somewhat by public and private consumption, which contributed 4 and 5.9 percentage points respectively. Investment made a positive contribution of 0.7 points to growth in 2015/16, against 0.2 points in 2014/15. It should also be noted that export growth had a negative impact of 0.3 points, compared with a negative impact of 0.4 points during the financial year 2014/15.

Turning to demand, public and private consumption continued to fuel growth during the 2015/16 financial year. Private consumption increased by 4.2 per cent, 2 compared with 5.6 per cent during 2014/15. Public consumption rose by 4.3 per cent against 10.9 per cent during 2014/15. Recent data also indicate that investment grew substantially, by 6 per cent in 2015/16 compared with 1.4 per cent in 2014/15.

In the sphere of supply, five key sectors continued to fuel growth. The public administration sector, with a real growth rate of 8.8 per cent in 2015/16, contributed 0.8 points to growth as against 0.5 points in 2014/15. The other sectors which made a positive contribution to GDP growth were construction and public works, wholesale and retail trade, agriculture and hotels and restaurants, with growth rates of 10.7 per cent, 5.1 per cent,

2 All the figures on this page are taken from: Egypt, Ministry of Finance. The Financial Monthly, vol. 11, No. 8 (January 2016).

3.3 per cent and 4.5 per cent respectively, and contributions of 0.5 points, 0.7 points, 0.4 points and 0.4 points in 2015/16.

### **Budgetary policy**

The most recent indicators for the period July 2015 – May 2016 show an improvement in receipts. This improvement is due to the reforms introduced by the Government at the beginning of this budgetary period in the context of economic activity. Total receipts were mainly fuelled by a rise in tax revenue. They increased by 1.9 per cent to 356.6 billion Egyptian pounds (12.9 per cent of GDP) over the period July 2015-May 2016, compared with 350.1 billion Egyptian pounds (14.4 per cent of GDP) between July 2014 and May 2015. Expenditure rose by 8.9 per cent to 655 billion Egyptian pounds (23.6 per cent of GDP) during 2015/16, compared with 601.4 billion Egyptian pounds (24.8 per cent of GDP) during the previous period. The budget deficit grew to 11.2 per cent of GDP from 10.8 per cent the previous year.

### **Inflation and monetary policy**

Average annual inflation fell between July 2015 and May 2016. It stood at +9.8 per cent compared with +11 per cent between July 2014 and May 2015. This slowdown could be due to the introduction of new economic reforms at the beginning of 2014/15, resulting in an improvement in consumer purchasing power. Monthly inflation rose substantially to 12.3 per cent in May 2016, compared with 10.3 per cent in April 2016. It has remained high since May 2015, at a rate of 13.1 per cent. This increase could be due to a 14.3 per cent rise in food and beverages in May 2016 compared with 12.7 per cent in April 2016 and 14.8 per cent in May 2015. The product groups health, restaurants and hotels, culture and leisure, equipment and furniture, miscellaneous goods and services and transport also had an effect on the level of inflation during the period under review.

### **Current account**

The deficit on the current account increased, rising from 1.3 per cent of GDP in the first half of 2014/15 to 2.5 per cent in the first half of 2015/16. This stemmed from a small worsening in the trade balance of 5.5 per cent of GDP, following a drop in exports and imports of goods. A number

of factors account for this fall, the most important of which is the deterioration in crude petroleum prices and commodity prices. Imports of goods fell by 12.6 per cent<sup>3</sup> to US\$ :28.6 billion in 2015/16 compared with US\$ 32.7 billion in 2014/15. Exports of goods also fell by 26 per cent to US\$ 9.1 billion in 2015/16 compared with US\$ 12.3 billion the previous year. The fall in exports of goods may be attributed mainly to a fall in exports of crude petroleum and other commodities, following the worsening of international oil prices. The surplus on trade in services grew by only US\$ 2.2 billion (0.6 per cent of GDP) in 2015/16, compared with US\$ 4.1 billion (1.2 per cent of GDP) the previous year. Quarterly data indicate that the balance on trade in goods deteriorated during the first half of 2016, as a result of the fall in imports and the value of exports, leading to negative repercussions on the current account.

Investment underpinned a rise of almost 2.6 per cent in the surplus on the financial account in 2015/16 to US\$ 2.9 billion. Net direct investment rose by 0.9 per cent to US\$ 3.1 billion during the first half of the 2015/16 financial year. Portfolio investment recorded a net positive balance of US\$ 1.6 billion (0.4 per cent of GDP) in 2015/16 compared with US\$ 2.6 billion (0.6 per cent of GDP) in 2014/15, thanks to the repayment of debt of US\$ 1.25 billion contracted in 2005, which matured on 25 September 2015.
