# Foreword

The tourism sector in Namibia has enjoyed steady growth since the country's independence and has been regarded as the third largest contributor to the country's Gross Domestic Product (GDP). The Government of the Republic of Namibia affirms the importance of tourism, and it is set as a priority sector in national documents such as Vision 2030, the National Development Plans and the Harambee Prosperity Plans. Since independence in 1990, the tourism industry has experienced a growth in the number of international tourist arrivals from 254,978 in 1993 to 1,595,973 in 2019, before the onset of the COVID-19 pandemic. The pandemic, specifically from 2020 to 2021 had a devastating impact on the tourism industry in Namibia. International tourist arrivals declined by 89 percent (2020), resulting in the temporary and permanent closure of numerous businesses in the sector, and loss of jobs amongst others.

In an effort to revitalise the sector, the Government, through the Ministry of Environment, Forestry and Tourism (the Ministry) developed a Namibia Tourism Sector Recovery Plan (2022-2024). Strategic Intervention 4 of the Plan aims to "Increase tourism market intelligence through statistics and data collection". It recommends that both Government

authorities and the private sector collect tourism data and client feedback in a timely manner. This data can help to understand and track trends in the sector as well as traveller's behaviour, travel patterns, spending, and more to improve sectoral planning.

The Ministry therefore approached the United Nations Economic Commission for Africa (UNECA) Sub-Regional Office for Southern Africa (SRO-SA) for technical support in the construction of the 6th edition of the Tourism Satellite Account (TSA) for Namibia to measure the direct economic contribution of tourism to the economy. Constructing a Tourism Satellite Account is a complex and rigorous process, making the completion of this TSA report a major milestone and achievement for Namibia. The TSA will provide valuable insights into the direct economic contribution of tourism to the country's economy, enabling the formulation of effective policies and strategies for sector enhancement. Additionally, the TSA will serve as a monitoring and evaluation tool for existing policies and strategies, ultimately leading to a better future for Namibia's tourism sector and greater benefits for its citizens.

The Government of the Republic of Namibia remains grateful to UNECA and UN Namibia for their support in the realisation of this project. In addition, heartfelt gratitude is extended to the team of experts and various stakeholders who partook in this important exercise and finalisation of this project.

---

**Hon. Pohamba Shifeta (MP)**

**Minister of Environment, Forestry and Tourism**

# Preface

The Namibia Tourism Satellite Account (TSA) for the year 2022 is a significant development in the field of tourism statistics for Namibia. This publication is the first using the United Nations World Tourism Organization (UNWTO) methodology and to which Namibia Statistics Agency (NSA) was fully involved, reflecting the commitment to data accuracy, transparency, and the recognition of the importance of the tourism sector in the country's economy.

Tourism is a social, cultural and economic phenomenon related to the movement of people to places outside their usual place of residence, with pleasure being the usual motivation. It has impacts on the economy, environment, local population and the visitors themselves. Owing to this range of impacts and the wide spectrum of stakeholders involved, there is a need for a holistic approach to tourism development, management and monitoring in order to formulate and implement national and local tourism policies. Thus, having reliable statistics is essential for policymakers to make effective decisions that are based on evidence.

Tourism statistics are necessary for designing marketing strategies, strengthening inter-

institutional relations, evaluating the efficiency and effectiveness of management decisions and measuring tourism's contribution to the national economy. Statistics help assess the economic impact of tourism on the destinations visited and its interdependence with other social and economic activities.

In order to ensure that the compilation of integrated tourism statistics is in line with the compilation practices of other economic statistics, the concepts and framework are aligned with the System of National Accounts 2008 (SNA 2008). The SNA 2008 provides a framework for understanding the interface between demand for goods and services and the supply of these goods and services within an economy, namely the Supply and Use Tables (SUT). The SNA 2008 suggests the use of satellite accounts, annexed to its core, and share its basic concepts, definitions, classifications and accounting rules. One such satellite accounts is the Tourism Satellite Account which analyses in detail all the aspects of demand for goods and services which might be associated with tourism.

The Namibia Statistics Agency (NSA) together with the Ministry of Environment, Forestry, and Tourism, would like to thank all stakeholders who supported the compilation of this TSA. My sincere gratitude goes to the United Nations Economic Commission for Africa (UNECA) who provided technical support during its construction. Furthermore, I wish to thank the technical working committee that consolidated this report.

# Acknowledgement

The Namibia Tourism Satellite Account Report for 2022 is a result of the dedicated efforts and commitment of the TSA Technical Committee that comprised the Ministry of Environment, Forestry and Tourism (MEFT); Ministry of Home Affairs, Immigration, Safety and Security (MHAISS); Ministry of Finance and Public Enterprises (MFPE); Ministry of Labour, Industrial Relations and Employment Creation (MLIREC); Namibia Statistics Agency (NSA); Bank of Namibia (BoN), Namibia Investment Promotion and Development Board (NIPDB); Namibia Tourism Board (NTB); Federation of Namibian Tourism Associations (FENATA); University of Namibia (UNAM); Namibia University of Science and Technology (NUST); International University of Management (IUM); Namibia Airports Company (NAC). Sincere gratitude is thus extended to the Heads of these institutions for nominating officials from their institutions to serve on the committee.

The financial and technical support for the construction of this TSA was provided by the United Nations Economic Commission for Africa (UNECA) Sub-Regional Office for Southern Africa (SRO-SA)

in partnership with the Sub-Regional Office for East Africa (SRO-EA). Moreover, the technical advice from UNESCO and UN Namibia is acknowledged.

The Ministry acknowledges the funding assistance from UNDP-Namibia and UNECA for the Inbound and Outbound Tourism Expenditure Surveys and expresses its gratitude to the Namibia Statistics Agency for facilitating the data quality process (collection, validation and analysis), the Ministry of Home Affairs, Immigration, Safety, and Security (MHAISS) and Namibia Airports Company for granting permission to conduct the surveys at the designated eight points of entry/exit.

The Namibia TSA development process was spearheaded by Prof. Pius Odunga and Dr. Geoffrey Manyara from UNECA SRO-EA. We are also grateful for the guidance and project management from Ms. Olayinka Bandele and Ms. Voronica Mufudza, and the overall leadership of Ms. Eunice Kamwendo from UNECA SRO-SA. The Ministry treasures their hard work and dedication which led to the accomplishment of this report and the overall skills transfer.

# Glossary of Terms

## *Visitor*

A visitor is a traveller taking a trip to a main destination outside his/her usual environment, for less than a year, for any main purpose (business, leisure, or other personal purposes) other than to be employed by a resident entity in the country or place visited.

## *Tourist*

A tourist is defined as a non-resident visitor staying overnight.

## *Excursionist*

An excursionist (same-day visitor) is a non-resident visitor arriving and leaving the country on the same day.

## *Inbound tourism*

Inbound tourism comprises the activities of a non-resident visitor within the country of reference.

## *Outbound tourism*

Outbound tourism covers the activities of a resident visitor outside the country of reference as part of an outbound tourism trip.

## *Domestic tourism*

Domestic tourism comprises activities of a resident visitor within the country of reference either as part of a domestic tourism trip or part of an outbound tourism trip.

## *Internal tourism*

Internal tourism comprises domestic and inbound tourism.

## *System of National Accounts (SNA)*

A globally agreed standard set of recommendations on how to compile measures of an economic activity.

## *Supply and Use Tables (SUT)*

The SUT describes how goods and services become available in an economy (Supply Table) and how goods and services are used in the economy (Use Table) during a certain period.

## *Domestic tourism expenditure*

Domestic tourism expenditure is the tourism expenditure of a resident visitor within the economy of reference.

## *Inbound tourism expenditure*

Inbound tourism expenditure is the tourism expenditure of a non-resident visitor within the economy of reference.

## *Outbound tourism expenditure*

Outbound tourism expenditure is the tourism expenditure of a resident visitor outside the economy of reference.

## *Tourism balance of trade*

Tourism imports comprise goods and services purchased by residents on a trip outside the country, while tourism exports comprise goods and services purchased by non-residents visitors in the country. The tourism balance of trade is defined as tourism exports net of tourism imports.

## *Gross output for tourism sector*

Gross output for the tourism sector includes the value of goods and services produced by tourism

# Glossary of Terms

industries (tourism output) and imported items purchased by tourists.

## *Intermediate consumption*

Intermediate consumption of industries covers non-durable goods and services used up in the production process. For this TSA, intermediate consumption of industries (providing the product) has been calculated as a percentage of gross output assuming the same ratios of the SUT.

## *Valuation*

Gross output is valued at basic prices, meaning that, the amount receivable by the producer, exclusive of taxes payable and inclusive of subsidies receivable on the products. Intermediate consumption is at purchaser's price; meaning that, it includes trade margins of wholesalers and retailers and additional transport charges payable by the purchaser and non-deductible VAT.

## *Direct employment in the tourism industry*

Direct tourism employment is derived by applying the technical ratio (value-added of tourism share over value-added of the whole industry) to the number of people employed in each industry. This

approach produces a value for the number of people in each industry because of tourism.

## *Taxes on products*

Taxes on products are payable on goods and services when they are produced, sold, or used. These include excise duties, import duties, and Value Added Tax (VAT).

## *Taxes on production*

Taxes on production are taxes payable out of the value-added of producers. This category of taxes includes taxes levied on property, fixed assets, and labour employed.

## *Basic price*

The basic price is the amount receivable by the producer from the purchaser for a unit of a good or service produced as output minus any tax payable, and plus any subsidy receivable, on that unit as a consequence of its production or sale; it excludes any transport charges invoiced separately by the producer.

## *Specific Definitions*

### **Domestic tourism consumption**

Refers to the tourism consumption of a resident visitor within the economy of reference.

### **Gross margin**

The gross margin of a provider of reservation services is the difference between the value at which the intermediated service is sold and the value accrued to the provider of reservation services for this intermediated service.

### **Inbound tourism consumption**

Refers to the tourism consumption of a non-resident visitor within the economy of reference.

### **Internal tourism consumption**

Refers to the tourism consumption of both resident and non-resident visitors within the economy of reference. It is the sum of domestic tourism consumption and inbound tourism consumption.

### **National tourism consumption**

Refers to the tourism consumption of resident visitors, within and outside the economy of reference. It is the sum of domestic tourism consumption and outbound tourism consumption.

### **Non-monetary indicators**

Refers to the data measured in physical or other non-monetary units should not be considered a secondary part of a satellite account. They are essential components, both for the information they provide directly and to analyse the monetary data adequately.

### **Outbound tourism consumption**

Refers to the tourism consumption of a resident visitor outside the economy of reference.

### **Production account**

Records the activity of producing goods and services as defined within the System of National Accounts (SNA). Its balancing item, gross value added, is defined as the value of output less the value of intermediate consumption and is a measure of the contribution to GDP made by an individual producer, industry, or sector. Gross value added (GVA) is the source from which the primary incomes of the SNA are generated and are therefore carried forward into the primary distribution of income account. Value-added and GDP may also be measured net by deducting consumption of fixed capital, a figure representing the decline in value during the period of the fixed capital used in a production process.

### **Social transfers in kind**

This is a special case of transfers in kind which consist of goods and services provided by government and Non-Profit Institutions Serving Households (NPISHs) that are delivered to individual households. For example, health and education services. Rather than providing a specified amount of money to be used to purchase medical and educational services, the services are often provided in kind to make sure that the need for the services is met. Sometimes the recipient purchases the service and is reimbursed by the insurance or assistance scheme. Such a transaction is still treated as being in kind because the recipient is merely acting as the agent of the insurance scheme.

### **Total tourism internal demand**

Refers to the sum of internal tourism consumption, tourism gross fixed capital formation, and tourism collective consumption. It does not include outbound tourism consumption.

### **Tourism consumption**

Refers to the same formal definition as tourism expenditure. However, the concept of tourism consumption used in the Tourism Satellite Account

goes beyond that of tourism expenditure. Apart from the amount paid for the acquisition of consumption goods and services, and valuables for own use or to give away, for and during tourism trips, which corresponds to monetary transactions (the focus of tourism expenditure), it also includes services associated with vacation accommodation on own account, tourism social transfers in kind and other imputed consumption. These transactions need to be estimated using sources different from information collected directly from the visitors, such as reports on home exchanges, estimations of rents associated with vacation homes, calculations of Financial Intermediation Services Indirectly Measured (FISIM), among others.

### **Tourism commodity/Product ratio**

This ratio measures the proportion of domestic tourism product supply sold to visitors. Generally,

tourism characteristic products have a higher tourism ratio than tourism-connected products. Tourism consumption expenditure table provides the statistics on tourist demand for each tourism product. Tourism products supply table reflects the supply of tourism products in domestic industries. Most tourism products are not produced solely for tourism purposes. To separate the tourism and non-tourism components for a product, tourism spending was extracted from tourism product supply to give the tourism ratio of products.

### **Tourism industry ratio**

This is the ratio of the tourism demand for all tourism commodities produced by a given industry to its output of those commodities. The ratio is used specifically in the calculation, by industry, of GDP, employment and GFCF that is attributable to tourism.

# Executive Summary

# Executive Summary

Tourism Satellite Accounts provide an internationally recognized and standardized method of assessing the scale of tourism related production and its links across different sectors. The economic contribution of tourism to Namibia's economy was measured through the construction of the 10 TSA tables. Overall, the derived accounts analysed all aspects of demand for goods and services that are associated with tourism within the economy, monitored the operational interface of the supply of such goods and services, and evaluated how the supply interacts with other economic activities.

The primary objective of this TSA was to determine the direct economic contribution of tourism to Namibia's economy. The secondary objectives included estimating tourism demand and supply; assessing value added by tourism activities in the economy; measuring employment generated by tourism activities; the Gross Fixed Capital Formation (GFCF) by the sector; and the collective consumption of tourism services by the Government.

Namibia's TSA was constructed to achieve the set objectives by establishing macroeconomic aggregates that describes the size and economic contribution of different forms of tourism. This required gathering data on tourism consumption, domestic supply and imports, and constructing detailed production accounts of the tourism industries, including the linkages with other productive economic activities. The data used in the construction of this TSA was the Balance of Payments (BoP) travel statistics for 2022; the Inbound and Outbound Tourist Expenditure Surveys for 2022; Domestic Tourism Expenditure survey for 2015;

Tourist Arrivals Statistics for 2022; UNWTO Namibia mirror statistics for 2021; Namibia Labour Force Survey 2018; and macroeconomics aggregates from the National Accounts.

Furthermore, this TSA was also constructed based on various classification schemes and recommended approaches. The methodology that was followed was the UNWTO TSA methodology, with the use of the Tourism Satellite Account: Recommended Methodological Framework (TSA: RMF 2008) and International Recommendations for Tourism Statistics (2008).

In 2022, inbound tourism generated approximately N\$12.4 billion while domestic tourism generated approximately N\$12.6 billion. Outbound visitors expenditure was estimated to be about N\$2.6 billion. The Internal Tourism Consumption which includes the inbound and domestic tourism expenditure along with other components of tourism consumption was estimated to be about N\$25.5 billion. The other tourism consumption components amounted to N\$538.9 million. The Gross Value Added of Tourism Industries (GVATI) was estimated at N\$43.9 billion. The total national GDP in 2022 was N\$ 206.2 billion of which N\$14.3 billion was contributed by the tourism sector.

The total direct employment by tourism related industries was 57,571, which represented 7.9 percent of total employment. The direct contribution of Tourism to Gross Fixed Capital Formation was estimated at N\$401.8 million accounting for 1.4 percent of the total Capital Fixed Formation of N\$29.0 billion. The total collective consumption related to tourism in the 2021/22 financial year was N\$447.1 million, representing 1.7 percent of total collective consumption.

# General Background

# General Background

## *Namibia Profile*

The Republic of Namibia is a large and sparsely populated country located in sub-Saharan Africa on Africa's south-west coast. It borders the Atlantic Ocean to the west as well as Angola in the north, South Africa in the south, Zambia in the north-east and Botswana to the east. Namibia has an area size of 825,615 sq km, 14 administrative regions and an estimated population of about 2.6 million (2022). Its capital city is Windhoek, while regional capitals are Gobabis, Grootfontein, Katima Mulilo, Keetmanshoop, Lüderitz, Mariental, Nkurenkuru, Ondangwa, Oranjemund, Oshakati, Otjiwarongo, Swakopmund, Rundu, Tsumeb and Walvis Bay among others.

Namibia gained its independence on March 21, 1990, after a long liberation struggle against the South African apartheid rule, thereby gaining its commonly known local name "Land of the Brave". It is a country rich in cultural diversity with about 12 ethnic groups, and its nationals are called "Namibians".

Namibia is known for its mesmerising beauty, wide open spaces and abundant sunshine. Its terrain varies from coastal desert to semi-arid mountains, wetlands and plateau. It is an arid country for most parts but blessed with contrasting and pristine landscapes ranging from opulent vegetation and riverine woodlands in the north-eastern areas to mountains, gorges and spectacular desert settings in the southerly west. It has one of the world's highest sand dunes, the second largest canyon in the world, the Fish River Canyon, two UNESCO world heritage sites, namely Twyfelfontein and Namib Sand Sea, and is home to the *Welwitschia Mirabilis* which is amongst oldest plants alive.

With 20 National Parks covering about 17 percent of the country's land surface, Namibia has established a remarkable system of National Parks that is managed by the State, and constitutes the cornerstone of its hugely successful conservation programme. Namibia's commitment to the conservation of its biodiversity is reflected under Article 95 (l) of the Namibian constitution which provides the foundation for the formulation of policies, legislation and programmes aimed at safeguarding the country's biodiversity and ecosystems for the benefit of current and future generations. It is the first African country to incorporate aspects of conservation and natural resource protection into its constitution.

While having recovered Elephant and Lion populations to complete the Big Five in Namibia, the country also boasts some exemplary conservation successes with the successful reintroduction of the Black Rhino in the Kunene communal areas and Etosha National Park, and the reintroduction of Black Faced Impala. Namibia also boasts the largest population of free-ranging Cheetahs in the world.

Namibia so far has two sites that are listed on the UNESCO world heritage sites list, namely, Twyfelfontein which was inscribed onto the World Heritage List in 2007 and the Namib Sand Sea which was inscribed in 2013. These sites have exceptional universal value and currently act as a magnet for Namibia's tourist industry. The Namibia Naukluft Park in which the Namib Sand Sea is located is the only coastal desert in the world that includes extensive dune fields influenced by fog.

In addition, there are also sites that are on the UNESCO World Heritage Tentative List in Namibia such as:

Site	Year
Brandberg National Monument Area	2002
Fish River Canyon	2002
Welwitschia Plains	2002
Benguela Current Marine Ecosystem Sites	2016
Etosha Pan	2016
San Living Cultural Landscape	2016
Succulent Karoo Protected Areas	2016
Okavango Delta	2016

Namibia also has thirty (30) museums countrywide which include thirteen in the Northern parts of the country, six in the central parts, three in the south, five in the coast and seven in Windhoek. These museums include Museum of Namibian Music, Nakambale Museum, Onandjokwe Medical Museum, Museum of Namibian Fashion, Helvi Mpingana Kondombolo Cultural Village, Damara Living Museum, Keetmanshoop Museum, Cape Cross Museum, Swakopmund Museum, Independence Memorial Museum, Windhoek City Museum and National Museum of Namibia among others.

International tourist arrivals to Namibia have been displaying a consistent upward trajectory since independence, with the highest tourist arrivals of 1 595 973 recorded in 2019. However, a departure from this trend occurred in 2020, due to the global onset of the devastating COVID-19 pandemic. The year 2020 witnessed a significant decline of about 89.0 percent in the number of inbound overnight visitors. Nonetheless, a positive shift became visible from 2021 to 2022, signifying a gradual recovery and revival. This stark pattern is illustrated in Figure 1 below.

*Figure 1: Trends of Inbound Visitor Arrivals, 1991 – 2022*

**Source:** Tourist Statistical Reports (MEFT), 2022

Namibia's key African tourist source markets are South Africa, Angola, Zambia, Zimbabwe and Botswana, while Germany, France, United Kingdom, United States of America and Switzerland are the key overseas markets. The peak season for international tourist travel to Namibia is from May to December while the off peak season runs from January to April.

## 1.2 *Namibia Fact Sheet*

**Official Name:** Republic of Namibia

**Country code:** NA, NAM

**Capital City:** Windhoek

**Area:** 825,615 sq km

**Population:** Approximately 2.6 million (2022)

**Currency:** Namibian dollars (N\$/NAD) pegged to South African rand

**Languages:** English (official), Oshiwambo, Otjiherero, Khoekhoegowab, RuKwangali, Setswana, Silozi, !Kung, Gciriku, Thimbukushu, Afrikaans, German

**Religion:** Secular state (>90% Christian; other religions/faiths)

**Climate:** Mostly hot, varies from hyper-arid and semi-arid to subtropical; cold desert climate in the southwest.

**Rainfall:** >600mm per year usually in the northeast. Far south and far west receives <50mm per year.

## 1.4 *Namibia's need for TSA*

The Government of the Republic of Namibia recognizes tourism as a crucial economic sector and Vision 2030 acknowledges tourism as an important employment generator in Namibia. Tourism is one of the prioritised sectors in the National Development Plans (NDPs) and the Harambee Prosperity Plans (HPPs) and is recognized as a significant contributor to the generation of foreign exchange earnings, investments, revenue, employment creation, rural development, poverty reduction and to the growth of the country's economy. Tourism also creates strong direct and peripheral benefits due to its multiplier effect.

The latest available statistical information on tourism in Namibia is very limited and is mainly based on international tourist arrivals and Balance of Payments (BoP) information. In addition, tourism is also not measured as a stand-alone industry in the National Accounts because of its cross-cutting nature; hence a "hotels and restaurants" proxy in the National Accounts is used to measure its contribution to the economy. This information does not capture the whole economic phenomenon of tourism in Namibia, and it also impacts the effective development, implementation and evaluation of policies in the sector, and efficient business operations. These limitations can be overcome by the development of the Tourism Satellite Account (TSA) as this account combines a comprehensive variety of data sources and aligns them within the national accounts framework.

Namibia developed its first edition of the Tourism Satellite Account (TSA) in 2006 using the World Travel and Tourism Council (W TTC) methodology and continued to publish the TSA using the same methodology until the fifth edition in 2015. As a member state of the United Nations World Tourism Organization (UNWTO), Namibia is expected to

produce a TSA that will allow for international comparison with other member states that uses the UNWTO methodology. This methodology uses national accounts concepts, definitions & classifications and measures different components of the tourism sector and employment in tourism industries.

The development of the Tourism Satellite Account is anchored in the National Strategy on Sustainable Heritage Tourism Development and Employment Creation Opportunities at the Community Level (2020-2030), under the activity "Revise and Strengthen Data and Tourism statistics" which falls under Strategic Objective 2 "To broaden tourism's role in social inclusiveness".

The Ministry of Environment, Forestry and Tourism with the assistance of UN Namibia, in its quest to strengthen the tourism data collection systems and improve tourism statistics, approached the United Nations Economic Commission for Africa (UNECA) Sub-Regional Office for Southern Africa for financial and technical assistance to produce a TSA that uses the UNWTO methodology, and that will also help in determining the contribution of tourism to the Namibian economy. This led to the beginning of the Namibia TSA project, launched on 19 May 2022 in Windhoek, Namibia. A TSA committee was established in this regard and a series of capacity building workshops were held to equip the members with skills required for the construction of the TSA. In addition to the workshops, the inbound and outbound tourism expenditure surveys were conducted from 17th to 30th October 2022 to produce estimates on the expenditure for the peak season of tourist travel for use in compiling the TSA support tables. These surveys were funded by the UNECA and the United Nations Development Programme (UNDP-Namibia) and facilitated by Namibia Statistics Agency and the Ministry of Environment, Forestry and Tourism.

Overall, it is anticipated that the TSA will provide information to help understand the impact of tourism on the Namibian economy and to monitor it over time. Also, it will allow for the formulation of policies and strategies geared towards improving the tourism sector.

**The information contained herein covers the following:**

- The contribution of the tourism sector to the GDP
- The size of the tourism industry in relation to other economic sectors
- Tourists' expenditure for inbound, domestic and outbound tourism
- The number of jobs in the sector
- The contribution of tourism to Gross Fixed Capital Formation (GFCF)

## **1.5 TSA Background**

TSA is a standard statistical framework and tool, developed by the UNWTO, for measuring the economic impact of tourism. It helps to harmonise and reconcile tourism statistics and generate tourism economic data. The Namibian TSA follows the international guidelines as set by the UNWTO specifically the Tourism Satellite Account Recommended Methodological Framework (TSA:

RMF 2008). The key feature of this methodology is that it analyses tourism and its relationship with the rest of the economic sectors within the central framework of the System of National Accounts (SNA 2008).

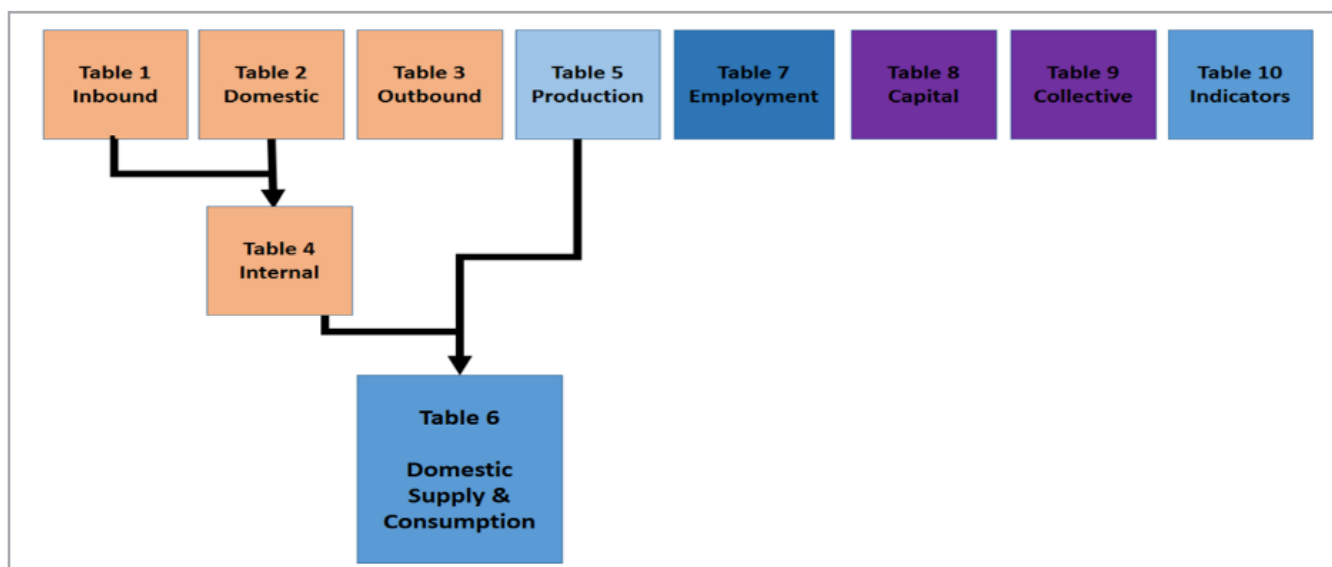

### **1.5.1 The ten TSA Tables**

The UNWTO TSA Recommended Methodological Framework (RMF 2008) recommends the use of ten TSA tables in the compilation process which show the inter-relationship among the economic variables in the TSA system. These tables are designed to show the interaction of the TSA variables and how they link with the variables in the National Accounts. The Namibian TSA used 2022 as a reference year to provide the most up-to-date and relevant data for analysis and comparison.

**It was compiled using the ten TSA tables as described below:**

- Tables 1 to 6 (1 to 3 TSA tables) cover the tourism consumption expenditures (demand side),
- Tables 7 to 17 (4 to 6 TSA tables) cover tourism demand, supply and reconciliation.
- Tables 18 to 30 (7 to 10 TSA tables) are an extension of the TSA which cover employment in the sector, tourism Gross fixed capital formation, tourism collective consumption as well as the tourism non-monetary indicators.

### 3: Tourism Satellite Account Tables 1 to 10

#### 1.6 System of National Accounts

The System of National Accounts (SNA) is a globally agreed-upon standard set of recommendations on how to compile measures of an economic activity. It describes a coherent, consistent and integrated set of macroeconomic accounts in the context of a set of universally agreed concepts, definitions, classifications and accounting rules. It also offers an outline of economic processes, recording how production is distributed among consumers, businesses, the government and foreign nations. Furthermore, it displays how income originating in production, modified by taxes and transfers, flows to these groups and how they allocate these flows to consumption, saving and investment.

Subsequently, the national accounts are one of the building blocks of macroeconomic statistics forming the basis for economic analysis and policy formulation. The SNA is intended for use by all countries, having been designed to accommodate the needs of countries at different stages of economic development. It also provides an overarching framework for standards in other domains of economic statistics, facilitating the integration of these statistical systems to achieve consistency with the national accounts.

#### 1.7 Supply and Use Tables

**Supply and Use Tables (SUTs) consist of two interlinked tables:**

- The Supply table which describes how goods and services become available in an economy during a certain period of time.
- The Use table which shows how goods and services are used in the economy during a certain period of time.

The SUTs show the income generated in the production process and thus are a main source of data in the compilation of the Table 19 (TSA Table 5, Production accounts of tourism industries and other industries) and Table 21 (Table 6, Domestic supply and internal tourism consumption by products).

The recommended valuation principles are the same as those of the SNA, which is, the production should be valued at basic prices, and consumption and use at purchasers' prices.

**The two primary purposes served by the SUT are:**

- It is central in the establishment of the level of GDP.
- It plays a crucial role in economic analysis in which the effects of policy changes and external shocks can be predicted.

**The SUT framework also incorporates the three approaches to measuring GDP:**

- Production approach
- Expenditure approach, and
- Income approach

Balancing SUTs provides a framework for estimating data that is not available (filling the gaps) and for eliminating discrepancies in data by ensuring consistency between different sources.

Although Namibia does not have a detailed Supply and Use Tables (SUT); the data from National Accounts was sufficient to derive the total supply and use for the tourism industry that was provided by the Namibia Statistics Agency (NSA).

## **1.8 System of Tourism Statistics**

The compilation of the TSA requires an adequate system of tourism statistics as a prerequisite for the preparation of the TSA tables. Many countries struggle with limited data availability and the quality and credibility of data from the existing sources. Also, statistics from existing data sources possess varying degrees of precision and levels of detail. In addition, some of the underlying concepts and definitions in the data do not correspond to the intended uses of the TSA. In consequence, data manipulations and adjustments are required before incorporation into the TSA.

## **1.9 Classifications and Sources of Data**

### **1.9.1 Classifications**

The construction of this TSA used the United Nations international classifications, namely the Central Product Classification (CPC Version 2) to identify tourism products and the International Standard Industrial Classification of all Economic Activities (ISIC Rev 4) for tourism activities.

### **1.9.2. Data Sources**

**The data used in the construction of this TSA was sourced from:**

- Namibia Tourist Statistical Report 2022
- Inbound and Outbound Tourism Expenditure Survey 2022
- Namibia Labour Force Survey 2018
- Namibia Domestic Tourism Expenditure Survey 2015
- UNWTO Namibia mirror statistics 2021
- Balance of Payments 2022
- Annual National Accounts 2022

### **1.9.3 Reference compilation manuals**

**The manuals below were used as a guide in the compilation process of this TSA:**

- International Recommendations for Tourism Statistics 2008 Compilation Guide, United Nations
- Tourism Satellite Account: Recommended Methodological Framework 2008, United Nations

- Measuring Employment in the Tourism Industries: Guide with Best Practices, (2014), International Labour Organization
- Tourism Satellite Accounts in the European Union Volume 2: Comparison of methodology and empirical results, (2009 edition), Eurostat
- System of National Accounts 2008
- Provide a coherent and credible set of tourism accounts that can be internationally comparable;
- Develop quantitative estimates of tourism value-added and, thus, analyse tourism's importance to an economy;
- Provide an instrument for designing more efficient policies on tourism and its employment aspects;

### 1.10 Purpose and Objectives of TSA

The TSA provides the framework which allows a country to determine the activities that are most dependent on tourism, and the activities that visitors consume or spend most on. Understanding these relationships allows for robust linkages to be established within economies and helps position the tourism industry to ensure it contributes more significantly to national development. The development of a TSA framework has been driven by the recognition that its implementation will serve to:

- Increase and improve knowledge of the importance of tourism in relation to the overall economic activity in a given country.

- Identify employment generation in tourism industries and the role tourism plays in job creation for different types of workers;
- Create awareness on the economic importance of this activity among players directly and indirectly involved in tourism; and
- Overall, TSA provides the basis for applying tourism multipliers and other models to measure the secondary and tertiary impacts of tourism expenditure across the whole economy.

## 2.1 TSA TABLE 1: INBOUND TOURISM

### 2.1.1. Introduction

The Tourism Satellite Account (TSA) Table 1 (Table 5 in the document) focuses on inbound tourism and the activities of non-resident visitors in a country. It details expenditure on tourism-related products and services. The journey is defined from arrival to departure.

As per the UNWTO International Recommendations for Tourism Statistics (IRTS) of 2008, it is strongly advised that data concerning inbound tourism expenditure be acquired through an inbound tourism survey conducted at points of departure supported by the balance of payments and national accounts statistics. The inbound tourism survey for Namibia was conducted by the Ministry of Environment, Forestry and Tourism (MEFT) in conjunction with the Namibia Statistics Agency (NSA) to solicit information relating to the estimated number of inbound visitors, the profile of inbound visitors, their expenditure pattern, and the purpose of visit, among others. The survey of the peak season was conducted during the period of 17<sup>th</sup> – 30<sup>th</sup> October 2022.

This section outlines the tourism demand from international visitors, including foreigners and Namibians living abroad. The visitors are categorised as either overnight or same-day visitors. It includes information about their duration of stay and spending behaviour within Namibia during 2022.

### 2.1.2. Purpose of Visit by Country of Residence

In 2022, Namibia welcomed a total of 527,610 inbound visitors. Among these visitors, the majority, constituting 79.8 percent, visited Namibia for the purpose of holiday, leisure, or recreational activities. Another 9.0 percent visited to reconnect with friends and relatives (commonly referred to as VFR - Visiting Friends and Relatives), while 7.0 percent had business-related reasons for their travel. A smaller portion (1.3%) were in transit, and 2.9 percent arrived in the country for various other purposes of travel (Table 1).

Table 1: Purpose of Visit by Country of Residence, 2022

### 2.1.3. Mode of Travel by Country of Residence

Most of the inbound visitors departing from Namibia chose air and road as their preferred modes of transportation in 2022. Out of the total inbound visitors, 319,206 (60.5 percent), opted for air travel, while 208,404 visitors, (39.5 percent) preferred road travel for their departure from Namibia as listed in Table 2.

## 2.1.4. Visitor Nights

In Namibia, 522,423 overnight visitors spent a total of approximately 9.7 million nights in 2022. These numbers demonstrate the growing appeal of Namibia as a tourist destination. On average, overnight visitors stayed for 19 nights. Among those who arrived by air for holiday/leisure/recreation purposes, they spent a total of around 5.8 million nights, while those who arrived by road for the same purpose spent approximately 2.5 million nights (Table 3).

*Table 3: Overnight Visitors by Mode of Travel and Purpose of Visit, 2022*

<b>TOTAL RESPONDENTS = 522,423</b>

<b>Grand Total</b>	<b>522,423</b>	<b>19</b>	<b>9,711,042</b>

## 2.1.5. Visitor Expenditure

A total of 527,610<sup>1</sup> visitors collectively spent approximately N\$14.8 billion in Namibia. The majority of these visitors, over 421,000 were categorized as being on holiday, leisure, or recreation, contributing about N\$12.0 billion (81.1 percent of the overall inbound expenditure) to the total. Visitors in the category of friends and relatives accounted for about N\$1.0 billion in spending (7.0 percent), while, those on business trips and in transit spent almost N\$932.3 million and N\$145.8 million, respectively (Table 4).

<sup>1</sup> No adjustments made for seasonality and the imputation of expenditure on accommodation, food, and beverages by individuals visiting friends and relatives.

**Table 4: Visitors Expenditure by Country of Residence and Purpose of Visit - N\$ Million, 2022**

### 2.1.6. Breakdown of Visitor Expenditure

The total inbound expenditure was proportionally disaggregated into several expenditure categories by consumption products and category of visitors. About 29.7 percent of the inbound expenditure is spent on accommodation services, followed by transport services (e.g., air, road and others) (28.2%), recreational services (13.5%) and food and beverage-serving services (12.0%) respectively, by overnight and excursionists' visitors (Table 5).

*Table 5: Proportion of Inbound Tourism Expenditure by Products and Category of Visitors- percent, 2022*

Products	Tourists (overnight visitors)	Excursionists (same-day visitors)	Visitors (Overnight &Excursionists)
<b>Consumption products</b>			
<b>Tourism characteristic products</b>	88.2	94.3	88.3
Accommodation services for visitors	30.1	-	29.7
Food- and beverage-serving services	11.6	44.6	12.0

### 2.1.7. Inbound tourism demand

TSA Table 1 deals with the inbound tourism expenditure for international visitors including both tourists (overnight visitors) and excursionists (same-day visitors). The inbound tourism expenditure is classified by products and category of visitors. Additionally, TSA Table 1 feeds Table 4 (Table 17 of the TSA of the document) of the TSA which combines internal tourism expenditure, which comprises both inbound tourism expenditure (TSA Table 1) and Table 10 the domestic tourism expenditure (TSA Table 2).

The TSA Table 1 (Table 5 of the document) depicts the tourism expenditure by international visitors, which gives a breakdown of the expenditure by tourists (overnight visitors) and excursionists (same-day visitors). The TSA Table 1 shows that overnight visitors spent about N\$12.2 billion whereas same-day visitors spent around N\$145.0 million, which in total gives an overall expenditure for inbound tourism of N\$12.4 billion.

As observed, the largest expenditure for overnight visitors in 2022 was on accommodation services which were around N\$3.7 billion, followed by transport services (e.g., air, road and others) which was about N\$3.4 billion, and 'sports and recreational services' contributing about N\$1.7 billion. The least expenditure was on travel agencies and other reservation services amounting to about N\$36.0 million. The largest expenditure for the same-day visitors was on food and beverage serving services which gave a total of approximately N\$64.8 million, followed by transport services (e.g., air, road and others) with an expenditure of approximately N\$40.3 million, and lastly, sports and recreational services which had an expenditure of about N\$27.8 million (Table 6).

*Table 6: Inbound Tourism Expenditure by Products and Category of Visitors - N\$ Million, 2022*

Products	Tourists (overnight visitors)	Excursionists (same-day visitors)	Visitors (Overnight &Excursionists)

## 2.2. TSA TABLE 2: DOMESTIC TOURISM

### 2.2.1. Introduction

According to the UNWTO, domestic tourism refers to the activities of residents travelling to and staying in places outside their usual environment within a country of reference (in this case Namibia) for any purpose other than work-related or remunerated activities.

The usual environment is defined in the Namibia Domestic Tourism Expenditure Survey report of 2015 (NDTES, 2015) as all places within a 40-kilometre radius of the place of usual residence of the respondent, and all places that the respondent visits at least once a week, irrespective of the distance from their place of usual residence.

### 2.2.2. Data sources

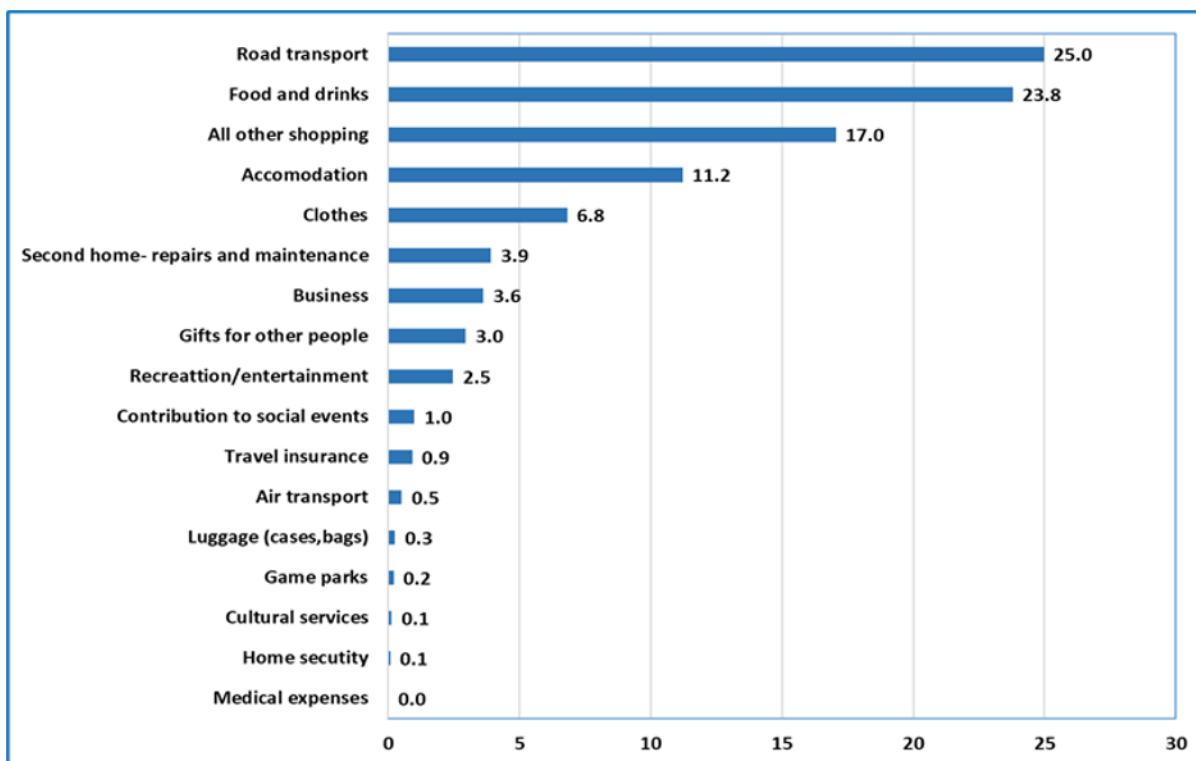

The data presented under domestic tourism was obtained from the following sources:

- Namibia Domestic Tourism Expenditure Survey 2015 (NDTES,2015)
- Annual National Accounts 2022 (ANA, 2022)
- Namibia Consumer Price Index (NCPI, 2022)

### 2.2.3. Domestic tourism expenditure distributions

About 25.0 percent of the total domestic expenditure was spent on the road transport category of domestic tourism characteristics. This is then followed by the 'food and drinks' category, which took 23.8 percent of total domestic expenditure, while the small amount was spent on medical expenses (Figure 4).

Figure 4: Total percentage distribution for domestic tourism expenditure, 2022

For same day visitors, majorities spent their funds on road transport, representing about 28.9 percent of same day visitors' expenditures. The category of 'all other shopping' accounted for about 23.7 percent of the same day domestic tourism expenditure.

Figure 5: Distribution of domestic tourism expenditure for same day visitors – percent, 2022

Overnight visitors, on the other hand, spent about 26.1 percent of their expenditures on the category of ‘food and drinks’ with only a few of them spending on the ‘home security’ and medical expenses categories (Figure 6).

*Figure 6: Distribution of domestic tourism expenditure for overnight visitors –percent, 2022*

Overnight visitors made about 4.7 million trips, while about 2.6 million trips were made by same day visitors. Based on expenditure, overnight visitors spent about N\$8.0 billion whereas the same day visitors spent about N\$3.0 billion. On average, each overnight visitor spent about N\$1 699.49 per trip and the same day visitors spent about N\$1 160.17 per trip.

*Table 7: Estimated trips and average spending, 2022*

	Tourists (overnight visitors)	Excursionists (same-day visitors)
Estimated number of trips (millions)	4.7	2.6
Estimated spendings per trip( N\$)	1,699.5	1,160.2
Total Expenditure-billions (N\$)	8.0	3.0

Overnight visitors for domestic tourism spent N\$2.1 billion on the category of ‘food and beverage-serving services’ while the least spending was on cultural services (N\$12.8 million). On the other hand, same-day visitors spent most of their expenditures on other consumption products, which recorded about N\$1.4 billion. The category of other consumption products included gifts for other people, clothes, business, medical expenses, luggage (cases, bags) and all other shopping.

*Table 8: Domestic tourism expenditure by products – N\$ million, 2022*

Products	Tourists (overnight visitors)	Excursionists (same-day visitors)	Total Domestic tourism Expenditure
<b>Tourism characteristic products</b>			
Accommodation services for visitors	1,638	-	1,638
Food- and beverage-serving services	2,079	549	2,627
Transport services (e.g. air,road and others)	1,900	889	2,789
Transport equipment rental services	-	-	-
Travel agencies and other reservation services	38	62	100
Cultural services	13	1	14
Sports and recreational services	290	112	403
Country-specific tourism characteristic goods	-	-	-
Country-specific tourism characteristic services	-	-	-
<b>Other consumption products</b>	1,997	1,364	3,360
<b>Valuables</b>	-	-	-
<b>Other</b>	-	-	-
<b>Total</b>	<b>7,955</b>	<b>2,977</b>	<b>10,931</b>

The domestic tourism aspect of outbound tourism resulted in a total expenditure of about N\$1.7 billion. The majority of this expenditure was spent on accommodation services for visitors which accounted for about N\$0.8 billion of the overall spending. The category of transport services followed, accounting for N\$0.4 billion of the total expenditure from the domestic aspect of outbound tourism.

*Table 9: Expenditure of domestic aspect of outbound tourism by product – N\$ million*

Products	Tourists (overnight visitors)	Excursionists (same-day visitors)	Total Outbound tourism Expenditure
<b>Tourism characteristic products</b>			
Accommodation services for visitors	<b>848</b>	-	848
Food- and beverage-serving services	<b>150</b>	30	180
Transport services (e.g. air,road and others)	<b>376</b>	19	395
Transport equipment rental services	-	-	-
Travel agencies and other reservation services	-	0	0
Cultural services	<b>1</b>	0	1
Sports and recreational services	<b>13</b>	0	14

<b>Total</b>	<b>9,546</b>	<b>3,030</b>	<b>12,577</b>

## 2.3 TSA TABLE 3: OUTBOUND TOURISM

### 2.3.1 Introduction

Outbound tourism is defined as the tourism activity of a country's residents outside its economic territory. Outbound tourism includes all activities of residents of a given country travelling to and staying in places outside their country of residence and/or their usual environment for not more than twelve consecutive months. In the context of an outbound round trip, travel starts from the time a resident departs from their usual place of residence until they return to the same place, in which their main destination was out of the country. Thus, it is important to note that not all of the expenditure may occur outside the economic territory.

This chapter on Outbound Tourism delves into the trends and patterns observed in outbound tourism based on the data provided in Table 9 (TSA Table 3). This chapter aims to provide insights into the various aspects of outbound tourism, including destinations, travel purposes, transportation modes, outbound visitors' expenditure, and breakdown of expenditure by-products and classes of visitors. The sample data used was obtained from the outbound tourism expenditure survey that collected tourist travel data between 17<sup>th</sup> - 30<sup>th</sup> October 2022.

### 2.3.2 Travel by country of destination

An important aspect of outbound tourism is the choice of destinations by visitors. The data from Table 11 reveals insights into the preferred destinations for outbound visitors in 2021. The top destination for outbound

visitors during 2021, was South Africa, which took up a share of 47.5 percent of the overall outbound visitors. Botswana, Zambia and Angola took up the second, third and fourth shares of total outbound tourism with shares of 14.7 percent, 9.8 percent and 6.7 percent, respectively. To provide a comprehensive understanding of the geographical preferences of outbound visitors, Table 11 also categorized outbound tourism data by region. This shows that the majority of Namibia's outbound tourism occurs in Africa with a 90.8 percent share of total outbound tourism, followed by Europe and Asia with shares of 5.5 percent and 1.8 percent, respectively.

*Table 11: Outbound visitors, by country of destination, purpose of visit, and mode of travel, 2021*

Region	Holiday/Leisure/Recreation		Visiting friends and relatives		Business/Professional		Other Purpose of Visit		Total Number of Visitors

### 2.3.3 Visitor nights

The average number of nights spent by an outbound visitor was 7 nights. Visitors who travelled to Hong Kong had the longest average length of stay at 156 nights.

*Table 12: Visitors' total and average length of stay, 2021*

Country	Total Nights Spent	Total Number of Visitors	Average Night Spent
<b>Africa</b>	<b>1,460,297</b>	<b>246,719</b>	<b>6</b>
South Africa	738,384	129,042	6

<b>Others</b>	<b>12,780</b>	<b>144</b>	<b>89</b>
<b>Total</b>	<b>1,963,250</b>	<b>256,789</b>	<b>7</b>

### 2.3.4 Visitors Expenditure

The tourist expenditure was proportionally broken down into several categories based on survey estimation (Table 13). The data shows that more than half (52.1%) of the total outbound expenditure was spent on Accommodation, whereas 23.8 percent and 10.3 percent was spent on transportation and 'Food and beverages', respectively.

*Table 13: Table and average expenditure of household members that made the outbound trip, 2021*

Type Of Activity	Total expenditure (N\$ Million)	Average Expenditure (N\$)	Share (%)
Accommodation	1,356	4,989	52.1
Food and Beverages	269	990	10.3
Transportation	619	2,278	23.8
Shopping	6	21	0.2
Sport and recreational services	22	80	0.8
Others	330	1,215	12.7
<b>Total</b>	<b>2,602</b>	<b>9,574</b>	<b>100.0</b>

### 2.3.5 Outbound Visitors' Expenditure

The expenditure of outbound tourists is a key indicator of the economic impact of international travel. This section of the chapter examines the overall expenditure of outbound visitors, highlighting trends in spending over time. It analyses factors influencing expenditure, such as exchange rates, economic conditions, and travel motivations. By understanding the spending patterns of outbound travellers, stakeholders can identify opportunities to enhance the tourism experience and stimulate local economies.

During the year 2021, mirror statistics provided by the UNWTO estimated that 271,751 outbound visitors originated from Namibia. The majority of these visitors travelled for business-related trips (34.5%). These were followed by those who travelled to visit friends and relatives (24.4%). A small share of outbound visitors travelled for other personal reasons such as education and health-related reasons at 17.8 percent.

Understanding the purpose of travel is crucial for analysing outbound tourism trends. The data in Table 14 above, allows us to identify the average daily expenditure by the primary motivations behind international travel to regions. The data shows that the outbound visitors who travelled for Business/Professional purposes spent about N\$1.2 billion making up 45.0 percent of the total outbound tourism expenditure. The least amount was spent by outbound visitors that travelled for other purposes making 9.8 percent of the total outbound tourist expenditure (N\$254.8 million), as shown in Table 14.

**Table 14: Breakdown of estimated Total outbound tourism expenditure by purpose of visit and mode of travel - N\$ Million 2021**

Region	Holiday/Leisure/ Recreation		Visiting friends and relatives		Business/ Professional		Other Purpose of Visit		Total Expenditure
	Air	Road	Air	Road	Air	Road	Air	Road	
Africa	242	183	123	196	622	385	73	144	1,968
Asia	37	-	5	-	52	-	-	-	95
Europe	246	-	84	-	69	-	37	-	436
North America	30	-	11	-	28	-	-	-	70
Oceania	4	-	10	-	-	-	-	-	14
South America	4	-	-	-	8	-	-	-	12
Others	-	-	-	-	6	-	-	-	6
<b>Total</b>	<b>563</b>	<b>183</b>	<b>234</b>	<b>196</b>	<b>787</b>	<b>385</b>	<b>110</b>	<b>144</b>	<b>2,602</b>

The mode of transportation chosen by outbound tourists is another critical element for analysis. The data from Table 15 provides insights into the spending patterns of outbound visitors using different modes of travel.

**Table 15: Breakdown of estimated average outbound tourism expenditure by purpose of visit and mode of travel – N\$, 2021**

Region	Holiday/Leisure/ Recreation		Visiting friends and relatives		Business/ Professional		Other Purpose of Visit		Average Spent
	Air	Road	Air	Road	Air	Road	Air	Road	
Africa	2,090	2,200	762	805	1,824	1,595	758	735	1,348
Asia	3,928	-	4,394	-	525	-	-	-	845

<b>Grand Average</b>	<b>2,532</b>	<b>2,174</b>	<b>909</b>	<b>805</b>	<b>1,432</b>	<b>1,595</b>	<b>567</b>	<b>735</b>	<b>1,325</b>

### 2.3.6 Breakdown of Outbound Visitors' Expenditure by Products and Classes of Visitors

To gain a deeper understanding of outbound visitors' expenditure, this section breaks down expenditure into various categories, such as accommodation, transportation, food and beverages, entertainment, and shopping. This breakdown provides valuable insights into the specific economic sectors that benefit from outbound tourism and helps stakeholders tailor their offerings to meet the preferences of different visitor segments.

TSA Table 3 (Table 16 of the document) focuses on outbound tourism expenditure by products and classes of visitors. Over N\$2.6 billion was spent on outbound tourism of which about N\$1.4 billion was on Accommodation services for visitors while only N\$269.0 million was on Food and beverage serving services.

**Table 16: Outbound tourism expenditure by products and classes of visitors – N\$ Million, 2021**

Products	Tourists (overnight visitors)	Excursionists (same-day visitors)	Visitors
Consumption products			
Tourism characteristic products			
Accommodation services for visitors	1,356	-	1,356
Food- and beverage-serving services	240	29	269
Transport services (e.g. air,road and others)	-	-	-
Transport equipment rental services	600	19	619
Travel agencies and other reservation services	4	-	4
Cultural services	-	0	0

Other	160	-	160
<b>Total</b>	<b>2,549</b>	<b>53</b>	<b>2,602</b>

## 2.4 TSA TABLE 4: INTERNAL TOURISM CONSUMPTION

### 2.4.1 Introduction

TSA Table 4 (Table 17 of the document) presents other components of tourism consumption in addition to tourism expenditure given in TSA Tables 1 and 2.

#### These components include:

- a. Services associated with vacation accommodation on own account; this comprises of all imputed accommodation services related to accommodation units on own account and all other types of vacation home ownership, and expenditure related to their acquisition, that is not capitalised as part of the investment,
- b. Tourism social transfers in kind (except refunds); This includes the value of individual non-market services provided by governments and Non-Profit Institutions Serving Households (NPISH) that benefit visitors and exceed the values paid by the visitors themselves;
- c. Other imputed consumption: This includes all other imputed items not previously included, such as services benefiting visitors for which they do not pay (costs of vacation residences/ camps provided by producers for the benefit of their employees).

### 2.4.2 Internal consumption by product and form of tourism

Internal tourism consumption on tourism characteristics products is estimated at N\$25.5 billion of which N\$6.7 billion (26.2%) was spent on Transport services and N\$6.6 billion (25.9%) on Accommodation services for visitors while, Food and beverage-serving services accounted for N\$4.3 billion (17.2%). The domestic tourists consumed about N\$12.6 billion, representing 49.4 percent of total internal consumption. The consumption by inbound tourists was estimated at N\$12.4 billion which accounts for 48.5 percent of total internal consumption. The Other components of tourism consumption amounted to N\$538.9 million.

*Table 17: Internal tourism consumption by products Million N\$, 2022*

Products	Internal tourism expenditure (2022)			Other components of tourism consumption	Internal tourism consumption
	Inbound tourism expenditure	Domestic tourism expenditure	Internal tourism expenditure

# Tourism Supply

# Tourism Supply

## 3. TSA TABLE 5: TOURISM SUPPLY

### 3.1 Introduction

Tourism supply demonstrates industries that produce tourism consumption products available for internal demand. The data on the supply-side is obtained from the Namibia Statistics Agency Annual National Accounts for the year 2022.

### 3.2 Tourism Characteristic Industries

Tourism Satellite Accounts defines a tourism characteristic industry as a group of establishments whose principal productive activity is tourism characteristic activity. Tourism industries are the group of all tourism characteristic industries.

**Supply is reported for the following main industries:**

- Accommodation services for visitors
- Food- and beverage-serving services
- Transport services
- Transport equipment rental services
- Travel agencies and other reservation services
- Cultural services
- Sports and recreational services, et cetera

### 3.3 Production Accounts

TSA Table 5 (Table 19 of the document) captures the production of products by tourism characteristic industries and the inputs (intermediate consumption) that goes into the production process. National accounts give information on output, intermediate consumption, and gross value added. The output is broken down by product and is valued at basic prices, and the intermediate consumption (inputs) is valued at purchasers' prices. The difference between these two values is the Gross Value Added (GVA) at basic prices.

The production accounts demonstrate the output at basic prices, intermediate consumption and Value Added for each tourism specific industry. The values are computed based on the System of National Accounts (SNA) 2008.

Industries are classified according to International Standard of Industrial Classification (ISIC) revision 4 while products are classified using the Central Product Classification, revision 2. However, tourism does not form a separate industry in the ISIC consequently, tourism industries and products are highlighted and extracted using Tourism Satellite Account: Recommended Methodological Framework 2008.

### 3.4 Products output

The total output at basic prices for tourism related industries was estimated at N\$73.2 billion of the total output at basic prices for the overall economy, of which accommodation services for visitors accounted for N\$14.0 billion representing 19.2 percent (Table 18). Transport services was estimated at N\$10.9 billion (14.9 percent) while 'Food and Beverage services' was estimated at N\$4.6 billion (6.3 percent). Other Consumption products<sup>2</sup> contributed 50.5 percent to the overall domestic supply. The least contributors to the tourism related services were Travel agencies and other reservation services followed by Transport equipment rental services which contributed 0.8 percent and 1.5 percent respectively.

*Table 18: Output for tourism related products - N\$ Million, 2022*

Products	Output of domestic producers (at basic prices)	Share of Output of domestic producers
Accommodation services for visitors	14,028	19.2
Food- and beverage-serving services	4,580	6.3
Transport services	10,901	14.9
Transport equipment rental services	1,107	1.5
Travel agencies and other reservation services	567	0.8
Cultural services	2,007	2.7
Sports and recreational services	3,011	4.1
Country-specific tourism characteristic goods	-	0.0
Country-specific tourism characteristic services	-	0.0
Other consumption products	36,984	50.5
Non-consumption products	-	0.0
Valuables	-	0.0
Other non-consumption products	-	0.0
<b>Total output (at basic prices)</b>	<b>73,186</b>	<b>100.0</b>

TSA Table 5 (Table 19 below) shows the 2022 production accounts of tourism related industries. The table presents an equal number of tourism characteristics products in rows and columns. This is then demonstrated in a diagonal pattern starting on the upper left of the table and the data gradually falls to the right. Each column presents the total supply at basic prices for the tourism characteristic product similarly to the row.

The last second row presents the intermediate consumption at purchasers' prices. This represents the inputs required to produce the corresponding outputs in that column. The last row of the table portrays the balancing item between total supply and intermediate consumption known as Value Added at basic prices.

The total output for the overall economy stood at N\$314.0 billion at basic prices and Intermediate Consumption at N\$124.1 billion resulting in the Value Added of N\$189.9 billion. The results of output, intermediate consumption and value additions for the other industries are highlighted in TSA table 19 below.

<sup>2</sup> Other Consumption products is based on total output of wholesale and retail sector

**Table 19: Production accounts of tourism industries and other industries at basic prices N\$ Million, 2022**

Products	Accommodation for visitors	Food- and beverage-serving industry	Transport services	Transport equipment rental	Travel agencies and other reservation services industry	Cultural industry	Sports and recreational industry	Other consumption products	Total	Other industries	Output of domestic producers (at basic prices)

# Reconciliation of Demand and Supply

# Reconciliation of Demand and Supply

## 4. TSA TABLE 6: RECONCILIATION OF DEMAND AND SUPPLY

### 4.1 Introduction

TSA Table 6 (Table 21 of the document) is the core of the Tourism Satellite Account; it is where the reconciliation between domestic supply and internal tourism consumption takes place. The reconciliation of supply and demand is facilitated through 'Internal Tourism Consumption' (TSA Table 4) and domestic supply. Domestic output (production by resident producers, TSA Table 5) and imports are compared to internal tourism consumption. Conclusions are derived regarding the gross value added attributable to tourism for each of the industries that serve visitors. The main aggregates derived from Table 6 are Tourism Direct Gross Value Added (TDGVA) and Tourism Direct Gross Domestic Product (TDGDP).

Gross Value Added (at basic prices) corresponding to tourism is derived for all industries to obtain Tourism Direct Gross Value Added. Tourism Direct GDP (TDGDP) is generated by adding taxes, less subsidies. In the case of goods, only retail trade margins are considered.

### 4.2 Tourism Contribution Measures

Tourism Satellite Account: Recommended Methodological Framework 2008 (TSA: RMF 2008) provides the following as a set of relevant indicators to measure the size of tourism in an economy.

- Share of internal tourism consumption to supply
- Gross Value Added for the Tourism Industries (GVATI)
- Tourism Direct Gross Value Added (TDGVA)
- Tourism Direct GDP (TDGDP)

#### 4.2.1 Gross Value Added

The performance and contribution of a productive economic activity in an economy is generally measured by its value-added (the difference between the value of output and the value of intermediate consumption), a measurement which ensures that there is no duplication when different productive activities are compared and aggregated. The System of National Accounts 2008 provides the following definitions: Gross Value Added is the value of output less the value of intermediate consumption. Net Value Added is Gross Value Added less consumption of fixed capital, which represents the corresponding decline in the value of the assets used in the production process.

Since value added is intended to measure the additional value created by a production process in an economy, it is measured net because the consumption of fixed capital is a cost of production. However, consumption of

fixed capital can be difficult to measure in practice, and it may not always be possible to make a satisfactory estimate of its value. The Tourism Satellite Account adopts the gross measurement of value added as recommended in the System of National Accounts (SNA 2008). During 2022, the Gross Value Added by all industries stood at N\$189.9 billion.

#### 4.2.2 Gross Value Added for the Tourism Industries

Gross Value Added for the Tourism Industries (GVATI) is the sum of the total gross value-added belonging to all tourism industries, regardless of whether all their output is provided to visitors and the degree of specialisation of their production. Although the GVATI is an indicator often used to measure the direct economic contribution of tourism in the economy of reference, it is an inadequate indicator of the size of tourism in a country. During 2022 the Gross Value Added for the Tourism Industries in Namibia was estimated at 6.9 percent. In monetary terms, the total national GDP in 2022 was N\$ 206.2 billion of which N\$14.3 billion was contributed by the tourism sector.

Figure 7: Gross Value Added - N\$ Million, 2022

#### 4.2.3 Tourism Direct Gross Value Added

The production processes by which internal tourism consumption (except imports) is provided were the basis for the compilation of Tourism Direct Gross Value Added (TDGVA). This aggregate does not cover the effects of other components of Total Tourism Internal Demand (TTID), such as gross investments or collective consumption. The use of the term 'direct' in this aggregate refers to the fact that the Tourism Satellite Account measures only that part of value added (by tourism industries and other industries) due to visitors' consumption and leaves aside the indirect and induced effects that such consumption might generate.

The TDGVA includes the part of gross value added generated by all industries in provision of goods and services to visitors (acquisition before a trip), or by third parties for visitors' benefit. The TDGVA also includes the part of gross value added associated with the output of other (non-tourism) industries as long as this output responds to tourism consumption. Consequently, the TDGVA can be seen to be independent of the definition of tourism characteristic products and tourism industries. This feature enhances its usefulness as an internationally comparable measure of the economic importance of tourism. The Tourism Direct Gross Value Added (TDGVA) was estimated at N\$13.2 billion in 2022.

TDGVA measures only the part of gross value added generated by tourism industries and other industries in responding to tourism internal consumption. Thus, it measures the total direct effects of tourism as it excludes the contribution of other components of Total Tourism Internal Demand (TTID).

#### 4.2.4 Tourism direct gross domestic product

The total GDP of an economy is equal to the sum of gross value added by all industries (at basic prices) plus net taxes on products and imports. It is possible to measure the part of GDP attributable directly to internal tourism consumption as the sum of the part of gross value added (at basic prices) generated by all industries in response to internal tourism consumption, plus the amount of net taxes on products and imports included within the value of this consumption expenditure at purchasers' prices. This part of GDP is the Tourism Direct Gross Domestic Product (TDGDP).

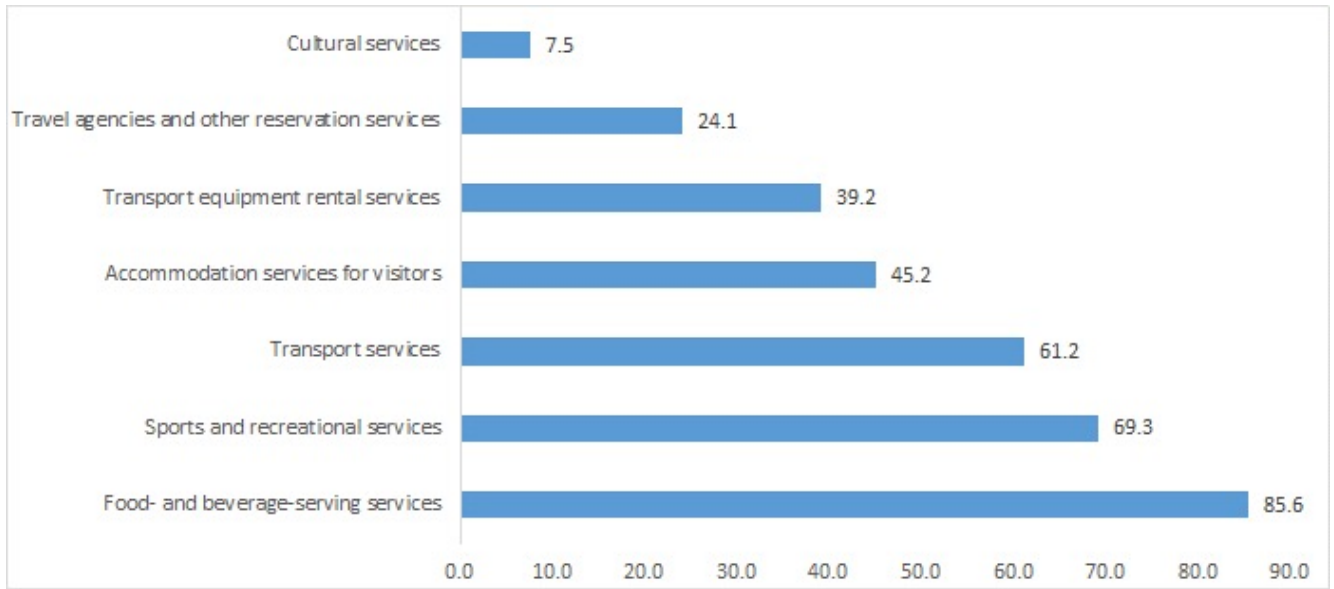

The Tourism ratios show the proportion of goods and services supplied and internally consumed by tourism. Table 20 presents tourism ratios applicable to Namibia's tourism industry in 2022. Around 54.1 percent of total output of goods and services for tourism related industries was internally consumed by inbound and domestic visitors. The findings indicate that transportation services (33.4%), accommodation services for visitors (32.6%), and food and beverage service (20.0%) are the top three contributors to internal tourism expenditures, Table 20.

*Table 20: Tourism output shares – N\$ Million, 2022*

<b>Tourism Industry</b>	<b>Output N\$</b>	<b>Tourism share N\$ Million</b>	<b>Tourism share (%)</b>
Accommodation services for visitors	14,028	6,379	32.6
Food- and beverage-serving services	4,580	3,914	20.0
Transport services	10,901	6,537	33.4
Transport equipment rental services	1,107	425	2.2
Travel agencies and other reservation services	567	134	0.7
Cultural services	2,007	148	0.8
Sports and recreational services	3,011	2,045	10.4
<b>Total</b>	<b>36,202</b>	<b>19,582</b>	<b>100.0</b>

When internal tourism consumption is compared to total supply within the individual tourism industries, direct tourism has a large impact on Food and beverage serving services where it accounts for 85.6 percent of output. Furthermore, 69.3 percent of the Sports and recreational services was consumed by inbound and domestic visitors, Figure 8.

Figure 8 : Internal tourism consumption (at purchases price) as a share of total Domestic supply (at purchases prices) – percent, 2022

The domestic and inbound visitors consume about 85.1 percent of the total output of the 'Food and beverage serving services', followed by 'Sports and recreational services' with a share of 69.3 percent and Accommodation services for visitors (45.4%). The product with the least consumption share is cultural services with a share of 7.5 percent, Table 21.

## Summary

During 2022 tourism's direct contribution to GDP was estimated at 6.9 percent. In monetary terms, the total national GDP was N\$ 206.2 billion of which N\$14.3 billion was contributed by the tourism sector. The Tourism Direct Gross value added (TDGVA) was estimated at N\$13.2 billion in 2022.

# Extension to the Basic TSA

## 5.1 TSA TABLE 7: EMPLOYMENT IN TOURISM INDUSTRIES

### 5.1.1 Introduction

Namibia embraces tourism as a vehicle to drive the reduction of poverty and create a sustainable livelihood for the local communities. As a result, tourism is one of the fastest-growing economic sectors in Namibia. Understanding the economic impact of tourism requires answering important questions regarding employment attributable to tourism. The general outlook of tourism employment in Namibia is characterised by a large group employed in informal, seasonal and low paying jobs.

#### 5.1.1.1 Definition and Concepts

**Persons in employment** are defined as all those of working age who, during a period of one week preceding the date of interview, were engaged in any activity to produce goods or provide services for others in exchange for pay or profit as per the 19th International Conference for Labour Statisticians (ICLS). They comprise:

**Employed persons "at work"**, that is a person who worked in a job for at least one hour during the reference week.

**Employed persons "not at work"** due to temporary absence from a job, or to working-time arrangements (such as shift work, flex time and compensatory leave for overtime).

**Employment in Tourism** refers to all jobs (in all occupations) in the tourism Industries (IRTS, 2008)

**Tourism employment** refers to employment strictly related to the goods and services acquired by visitors.

**Number of persons employed** refers to a count of employed persons.

**Number of jobs** refers to the main, 2nd job etc. for the same person.

**Employees** - are all those workers who hold the type of job defined as 'paid employment jobs.'

**Employers** - are those workers who, working on their own account or with one or a few partners, hold the type of job defined as a 'self-employment job', and, in this capacity, on a continuous basis have engaged one or more persons to work for them in their business as 'employee(s).'

**Own account workers** - are those workers who, working on their own account or with one or more partners, hold the type of job defined as a 'self-employment job' and have not engaged on a continuous basis any 'employees' to work for them during the reference period.

**Contributing family workers** - are those workers who hold a 'self-employment' job in a market-oriented establishment operated by a related person living in the same household, who cannot be regarded as partners.

## Sources of Data

The main source of employment data in tourism was the 2018 Namibia Labour Force Survey data. In addition, a combination of the Statistical Business Register (SBR) database and the National Accounts database were also used as sources of data to compute employment estimates related to tourism.

### 5.1.2 Employment by tourism-related industries

Total direct employment in tourism related industries was computed using 2018 Labour Force Survey data (supply side) and the statistical business register (demand side). Tourism ratios from Table 6 (Total domestic supply and internal tourism consumption) were adopted to reconcile the demand and supply side of labour, with an assumption that the share of tourism in the economy does not change significantly over a short period of time.

#### 5.1.2.1 Total Establishments and Employment in Tourism Related Industries

Total establishments in tourism related industries were estimated to be approximately 17,082, which accounts for about 28 percent of all establishments (Table 24). Accommodation services for visitors had the most tourist establishments (10,365) and employed 27,244 persons.

Total direct employment by tourism related industries was 57,571 which translated to 7.9 percent of total employment (Table 22). The tourism contributes 14.4 percent to total employment in Namibia, of which 7.9 percent is directly attributable to tourism. Accommodation service for visitors has the most direct employment, with a contribution of 49.2 percent, whereas food and beverage serving services contributed 30.4 percent and 'Travel agencies and other reservation industry' accounts for the least direct employment of 0.3 percent.

*Table 22: Direct contribution of tourism related industries to employment, 2018 Labour Force Survey*

	All tourism related industries	% Total contribution to total employment	Direct tourism employment	% Direct contribution to total employment	% Direct contribution to employment in tourism
<b>Total</b>	<b>104,522</b>	<b>14.4</b>	<b>57,571</b>	<b>7.9</b>	100.0
Accommodation services for visitors	62,614	8.6	28,301	3.9	49.2
Food- and beverage-serving industry	20,442	2.8	17,499	2.4	30.4
Passenger transport	14,528	2.0	8,891	1.2	15.4
Transport equipment rental	1,341	0.2	526	0.1	0.9
Travel agencies and other reservation industry	687	0.1	166	0.0	0.3
Cultural industry	1,964	0.3	147	0.0	0.3
Sports and recreational industry	2,946	0.4	2,042	0.3	3.5

Total direct informal employment in tourism related industries was estimated at 63.9 percent compared to the national informal employment of 57.7 percent. The accommodation services for visitors accounted for the highest (33.7%) of the direct informal employment in tourism related industries.

**Table 23: Direct Formal and Informal Tourism Employment, 2018 Labour Force Survey**

Tourism related industries	Number			Percentage	
	Formal Employment	Informal Employment	Total	Formal Employment	Informal Employment
Accommodation services for visitors	8,894	19,408	28,301	15.4	33.7
Food- and beverage-serving industry	5,499	12,000	17,499	9.6	20.8
Transport services	5,043	3,848	8,891	8.8	6.7
Transport equipment rental services	298	228	526	0.5	0.4
Travel agencies and other reservation industry	94	72	166	0.2	0.1
Cultural industry	63	84	147	0.1	0.1
Sports and recreational industry	879	1,163	2,042	1.5	2.0
<b>Tourism Related Industries (Total)</b>	<b>20,769</b>	<b>36,802</b>	<b>57,571</b>	<b>36.1</b>	<b>63.9</b>
<b>National (all industries)</b>	<b>307,068</b>	<b>418,674</b>	<b>725,742</b>	<b>42.3</b>	<b>57.7</b>

There were 17,082 establishments in tourism related industries. Employed persons accounted for 49.1 percent (27,117 people) of tourism related jobs, with an assumption that number of jobs equals to persons employed.

**Table 24: Number of establishments and jobs in tourism related industries by industry and status in employment<sup>3</sup>**

Tourism related industries	Number of establishments	Number of jobs by status in employment		
		Employees	Self-employed	Total Direct employment
Accommodation services for visitors	10,365	12,288	14,956	27,244

<b>Percentage share</b>	<b>27.8</b>	<b>49.1</b>	<b>50.9</b>	<b>100.0</b>

## 5.2 TSA TABLE 8: TOURISM GROSS FIXED CAPITAL FORMATION

### 5.2.1 Introduction

The system of National Account defines the Gross Fixed Capital Formation (GFCF) as the total value of a producer's acquisitions, less disposals of fixed assets during the accounting period plus certain additions to the value of non-produced assets realized by the productive activity of institutional units. It includes tangible assets such as vehicles, machinery, equipment, buildings, and other construction works. In addition to some intangible assets, for example mineral exploration excursion. Fixed assets are tangible or intangible assets produced as outputs from processes of production that are themselves used repeatedly or continuously in other processes of production for more than one year. The availability of physical investment plays a crucial role in relation to tourism as the full extent of tourism is not viable when there is a lack of basic infrastructure in terms of transportation, accommodation, recreation, health services and other vital facilities that can act as a pull factor for the travellers to the destination.

<sup>3</sup> This excludes those who did not specify their status in employment.

## **5.2.2 Investment by Tourism Related Industries**

Tourism Driven Investment can mainly be categorized into the following three main categories as follow:

- Tourism-specific fixed assets
- Investment by the tourism industries in non-tourism-specific fixed assets
- Tourism-related infrastructure

## **5.2.3 Tourism-specific Fixed Assets**

Tourism-specific fixed assets are used exclusively or almost exclusively in the production of tourism-characteristic goods and services. If tourism did not exist, such assets would be of little value as they could not easily be converted to non-tourism applications. Such assets include, for example, railway passenger coaches, cruise ships, sightseeing buses, hotel facilities, convention centres, etc. Vacation homes are also included in this category although, in this case, they might easily be modified from secondary to principal dwelling of a household.

## **5.2.4. Investment by the tourism industries in non-tourism-specific fixed assets**

Investments by tourism industries in non-tourism specific fixed assets are not directly related to the tourism sector but are utilised by the tourism companies. These investments could include facilities for sport, recreational amenities, hotel or travel agency computer systems, hotel laundry facilities etc. The investment in the fixed assets lead to the enhancement of the overall tourism experience and cater to the needs of the travellers which, consequently, contribute to the growth and sustainability of the tourism sector.

## **5.2.5. Tourism-related infrastructure**

The tourism-related infrastructure refers to the infrastructure that is put in place principally by the public authorities to facilitate tourism which is usually even more difficult to identify. This infrastructure might have been developed at a specific moment in time for this specific purpose, or it might in fact facilitate tourism although this was not necessarily the primary or the unique intention.

Tourism-related infrastructure that is put in place principally by the public authorities to facilitate tourism, it might have been developed at a specific moment in time for this specific purpose, or it might in fact facilitate tourism even though this was not necessarily the primary or the unique objective of the investment. Gross fixed capital formation (GFCF) is measured by the total value of a producer's acquisitions, less disposals, of fixed assets during the accounting period plus certain additions to the value of non- produced assets (such as subsoil assets or major improvements in the quantity, quality or productivity of land) realized by the productive activity of institutional units.

**Table 25: Gross fixed capital formation of tourism industries and other tourism related industries N\$ Million, 2022**

Fixed assets related to tourism	Accommodation for visitors	Food and beverage-serving industry	Passenger Transportation	Machinery And Other Equipment
Accommodation for visitors	145			
Other non-residential buildings and structures proper to tourism industries		29		
Residential buildings		0		
Passenger transport equipment for tourism purposes			87	
Other machinery and equipment specialized for the production of tourism characteristic products				8
Other Products				
Investment by the tourism industries in other non-tourism specific produced assets	110	4	3	16
<b>TOTAL</b>	<b>255</b>	<b>33</b>	<b>89</b>	<b>25</b>

\* When calculating the differences manually in the figures above, there may occur slight differences that are due to rounding to the nearest decimal in MS Excel.

Non-tourism-specific fixed assets were estimated at N\$ 132.9 million translating into 32.9 percent of the total gross fixed capital formation for tourism related industries.

In conclusion, the direct contribution of tourism to Gross Fixed Capital Formation was N\$401.8 million representing 1.3 percent of the overall total of Fixed Capital Formation of N\$29.1 billion.

**Table 26: Tourism gross fixed capital formation of tourism industries and other tourism related industries N\$ Million, 2022**

Fixed assets related to tourism	Tourism gross fixed capital Formation	Other Industries	Total	Share of Tourism (%)
Accommodation for visitors	144.8	110.3	255.1	56.8
Other non-residential buildings and structures proper to tourism industries	29.1	3.7	32.8	88.8
Passenger transport equipment for tourism purposes	86.7	2.6	89.3	97.1
Other machinery and equipment specialized for the production of tourism characteristic products	8.2	16.4	24.6	33.3
<b>TOTAL</b>	<b>268.9</b>	<b>132.9</b>	<b>401.8</b>	<b>66.9</b>

TSA Tables 25 and 26 present the Tourism Gross Fixed Capital formation for 2022. In terms of tourism specific assets, GFCF related to accommodation for visitors was estimated at N\$144.8 million compared to the total gross fixed capital formation of N\$255.1 million, which represented 56.8 percent of the total.

Other non-residential buildings and structures related to tourism industries were estimated at N\$ 29.1 million compared to N\$ 3.7 million gross fixed capital formation for other industries related to tourism, thus representing 88.8 percent of the overall non-residential buildings and structures. Passenger transport

equipment for tourism purposes was estimated at N\$86.7 million for direct tourism industries compared to N\$89.3 million gross fixed capital formation for overall passenger transport equipment, representing 97.1 percent. Other machinery and equipment for the production of direct tourism products was estimated at N\$8.2 million compared to N\$24.6 million overall gross fixed capital formation related industries, thus translating into 33.3 percent share.

### **5.3 TSA TABLE 9: TOURISM COLLECTIVE CONSUMPTION**

Tourism Collective Consumption considers the goods and services mainly provided by the Government. These goods and services are automatically accessible and used by all community members. Examples of these services include laws, security and environmental protection. The provision of public goods and services is beneficial for the smooth operation and development of tourism activities. It establishes the operational framework that ensures the rendering of quality goods and services. Collective consumption refers to a service that is provided to the entire community or a specific group within the community.

#### **Sources of Data**

- Namibia National Budget 2021/2022 (01 April 2021 – 31 March 2022), whereby actual government expenditure was considered in alignment with the COFOG Functions (Classification of Functions of Government) with respect to budget items and main division functions.
- Government Finance Statistic Manual 2014

Tourism Collective Consumption was determined from the Government spending by focusing on items that are largely related to tourism as obtained from the Office of Ministries and Agencies. These include the Ministry of Défense and Veteran Affairs; Ministry of Fisheries and Marine Resources; Ministry of Education, Arts and Culture; Ministry of Environment, Forestry and Tourism; Ministry of Home Affairs, Immigration, Safety and Security. The data was obtained from Namibia National Budget 2021/2022, Actual Expenditures, Classification of Functions of Government Functions; Budget Items and Main Divisions. The total collective consumption related to tourism in the 2021/22 financial year was N\$447.1 million which is 1.7 percent of total collective consumption in Namibia.

Table 27: Tourism Collective Consumption, 2021/22

No.	Category	COFOG		Level of Government (Millions N\$)		
		Code	Name	National	Regional	Local

CS Collective Services

IS Individual Services

... No data available

**Source:** Ministry of Finance and Public Enterprises

Total collective consumption was estimated at N\$25.8 billion of which N\$ 447.1 million was consumed by tourists. Therefore, the percentage share of tourism in total collective consumption in Namibia was 1.7 percent.

## 5.4 TSA TABLE 10: NON-MONETARY INDICATORS

TSA table 10 (table 28 to 30 of the document) presents the non-monetary or quantitative indicators as considered in the previous tables of this document. Table 10 is particularly important for the interpretation of the monetary information presented. Areas of consideration included the number of trips undertaken making a distinction between overnight and same day trips, as well as the mode of travel. Equally, the number of registered establishments with the Hospitality Association of Namibia was used to dissect the number of rooms and beds available against the occupancies.

**The TSA Table 10 is divided into three (3) sections;**

- a. Number of trips and overnights by type of tourism and categories of visitors; and number of arrivals and overnights by means of transport for inbound tourism.
- b. Number of establishments and capacity by types of accommodation.
- c. Number of establishments in the tourism industries classified according to average number of jobs.

### 1. Inbound visitors

The total number of inbound visitors is made up of overnight visitors and same day visitors. The number of overnight visitors in 2022 was 522,423 while same day visitors made up about 5,187 amounting to a total of 527,610 visitors. The number of nights was obtained by multiplying the number of overnight visitors by the average length of stay. The average length of stay figure was calculated based on the survey results from inbound visitors at 8 main points of entry into Namibia.

### 2. Domestic visitors

Out of a total of 7,246,256 trips taken by domestic visitors in the year 2022, about 4,680,656 were overnight trips while same day trips accounted for 2,565,600. The number of nights was obtained by the number of overnight trips taken multiplied by the average length of stay.

### 3. Outbound visitors

The number of overnight outbound visitors for the year 2022 was 257,796 while same day visitors constituted 13,954 this amounted to the total outbound tourist visits of 271,750. The number of nights spent abroad by the outbound visitors was 1,963,250. The number of outbound overnights was obtained by multiplying the number of overnight trips by the average length of stay (Table 28 of the document).

**Table 28: Number of trips and overnights by type of tourism and categories of visitors**

Indicator	Inbound tourism			Domestic tourism			Outbound tourism		
	Tourists (overnight visitors)	Excursionists (same-day)	Visitors	Tourists (overnight visitors)	Excursionists (same-day)	Visitors	Tourists (overnight visitors)	Excursionists (same-day)	Visitors
Number of trips	522,423	5,187	527,610	4,680,656	2,565,600	7,246,257	257,796	13,954	271,750
Number of overnights	9,615,580		9,615,580	23,403,280		23,403,280	1,963,250		1,963,250
<b>Air</b>	<b>314,491</b>	<b>4,715</b>	<b>319,206</b>				<b>99,898</b>	<b>5,407</b>	<b>105,305</b>
Scheduled flights			271,325				84,913	4,596	89,509
Unscheduled flight			47,881				14,985	811	15,796
<b>Land</b>	<b>207,932</b>	<b>472</b>	<b>208,404</b>				<b>157,898</b>	<b>8,547</b>	<b>166,445</b>
<b>Total</b>	<b>522,423</b>	<b>5,187</b>	<b>527,610</b>	<b>4,680,656</b>	<b>2,565,600</b>	<b>7,246,257</b>	<b>257,796</b>	<b>13,954</b>	<b>271,750</b>

Air transport remains the most preferred mode of travel by inbound visitors to Namibia. Out of 5,187 same day visitors (excursionists) about 4,715 made use of air transport while only about 472 made use of land transport. The same trend is observed for the overnight visitors, out of 522,423 visitors to Namibia about 314,491 made use of air transport while about 207,932 made use of land transport.

In contrast, the outbound same day visitors had a difference of about 3,140 in favour of land travel as compared to air travel. On the other hand, out of a total of 257,796 overnight outbound visitors about 99 898 made use of air travel, whereas 157,898 made use of land travel.

TSA Table 10 (Table 29 of the document) presents the types and capacity of accommodation as derived from the Hospitality Association of Namibia registered members for the year 2022. The registered accommodation establishments were 2,657, with a total capacity of 1,090,074 rooms and 2,142,039 beds in total. The capacity utilisation of rooms amounted to 448,289 while the beds capacity utilisation amounted to 784,065.

**Table 29: Number of establishments and capacity by types of accommodation, 2022**

	Accommodation for visitors			Real estate activities in ISIC 68

## 6. CONCLUSION

This report provided an assessment of the contribution of tourism to the economy of Namibia using the UNWTO Tourism Satellite Account methodology. The 10 (ten) TSA tables were systematically constructed using both primary and secondary information.

The TSA Table 1 focused on inbound tourism and the activities of non-resident visitors in Namibia. It detailed expenditure on tourism-related products and services as obtained from the inbound tourism expenditure survey. The visitors were categorized as either overnight or same-day visitors. In total, the inbound overnight visitors spent about N\$12.2 billion, whereas the same-day visitors spent around N\$145.0 million which in total gives an overall expenditure for inbound tourism of N\$12.4 billion during 2022.

TSA Table 2 focused on categories of tourism expenditure that were obtained from domestic visitors through the Domestic Tourism Expenditure survey (2015). The 2022 estimates revealed that overnight visitors made about 4.7 million trips, while about 2.6 million trips were made by same-day visitors. In addition, domestic overnight visitors spent about N\$ 8.0 billion with a daily average spending of about N\$ 1,160.17 each. On the other hand, same-day visitors spent about N\$ 3.0 billion in total with an average daily spending of about N\$ 1,699.46 each. Furthermore, the domestic aspect of outbound tourism resulted in a total expenditure of about N\$ 1.6 billion.

The TSA Table 3 provides statistics on the trends and patterns of outbound tourism, including information on destinations, travel purposes, transportation modes, outbound visitors' expenditure, and breakdown of expenditure by products and classes of visitors. The overall outbound tourism expenditure was N\$2.6 billion.

Moreover, TSA Table 4 presented other components of tourism consumption in addition to the tourism expenditure given in TSA Tables 1 to 2. These components include: (a) services associated with vacation accommodation on own account which consist of all imputed accommodation services related to accommodation units on own account and to all other types of vacation home ownership, and expenditure related to their acquisition, that is not capitalised as part of the investment, (b) tourism social transfers in kind (except refunds).

TSA Table 5 presented industries that produce tourism consumption products available for internal demand.

TSA Table 6 presented the reconciliation between domestic supply and internal tourism consumption. The findings revealed that during 2022, tourism's direct contribution to GDP was estimated at 6.9 percent. In monetary terms, the tourism sector was valued at N\$ 14.3 billion compared to the total GDP of N\$206.2 billion. The Tourism Direct Gross Value Added was estimated at N\$13.2 billion.

TSA Table 7 focused on employment created by tourism characteristic industries and acquired by visitors. The findings revealed that tourism is a significant source of employment in the Namibian economy, accounting for 57,571 direct employment, translating to 7.9 percent of total employment. The table further revealed that there were 17,082 establishments in tourism related industries, highlighting the scale of the sector. Accommodation services for visitors had the most direct employment, with a contribution of 49.2 percent, whereas food and beverage serving services contributed 30.4 percent. Tourism direct contribution to informal employment was estimated at 63.9 percent of tourism employment. Approximately 50.9 percent of the labour force in the tourism related industries was self-employed, while the remaining 49.1 percent were employees.

TSA Table 8 focused on Gross Fixed Capital Formation (GFCF) and indicated that the direct contribution of tourism to GFCF was N\$ 401.8 million which represent 1.3 percent of the overall GFCF in 2022.

TSA Table 9 concentrated on Tourism Collective Consumption (TCC) which considers the goods and services mainly provided by the Government. The total collective consumption related to tourism in the 2021/22 financial year was N\$447.1 million which represented a 1.7 percent direct contribution of tourism to collective consumption at the national level.

TSA Table 10 (a) presented the non-monetary indicators. Out of a total of about 8 million trips taken by domestic visitors in the year 2022, about 4.7 million were overnight trips while same day trips accounted for 2.6 million. TSA Table 10 (b) demonstrated that the number of overnight outbound visitors for the year 2022 was 257,796 while same day visitors constituted 13,954 adding up to 271,750 outbound visitors. The number of nights spent abroad by the outbound visitors was 1,989,001. Furthermore, TSA Table 10 (c) presented the types and capacity of accommodation as derived from the Hospitality Association of Namibia registered members for the year 2022. 2,657 registered businesses were considered with a total capacity of 1,090,074 rooms with 2,142,039 total beds. The capacity of utilisation for the rooms was 448,289 while the beds capacity utilisation was 784,065.

# APPENDIX 1: TOURISM DEMAND

## 8. APPENDIX

### INBOUND TOURISM

#### Departure/Arrivals

The inbound tourism survey questionnaire was administered to a random sample of 1,119 respondent visitors who departed through air and road-selected points of entry. The survey was conducted during October 2022.

Table 1A: Visitors by Purpose of Visit and Country of Residence – (Sample Unweighted), 2022

## Overnight Visitors by Mode of Travel and Purpose of Visit

The survey questionnaire was given to both overnight and same-day visitors to gather information about their experiences and preferences during their visit to Namibia. The same-day visitors were identified by subtracting the number of overnight visitors from the total number of respondents in the sample. The sample consisted of 1,108 respondents who were overnight visitors. In 2022, these visitors collectively spent a total of 20,596 nights in Namibia, with an average stay of 18 nights per visitor. The proportion (percent of Total Arrivals) of the total overnight sample arrivals was computed and the same was applied to achieve the estimated overnight visitors per mode of travel and purpose of visit. The average night spent was computed by dividing the total night spent by the total arrivals.

## Visitors Expenditure by Purpose of Visit and Country of Residence

The estimated expenditure for the inbound visitors by the purpose of the visit was computed from the sample survey data, below is an illustration of how the total expenditure for business and holiday/leisure/recreation was achieved. Total expenditure in Namibia per the purpose of the visit was derived by multiplying total arrivals by the average night spent and average expenditure per day.

Table 1H: Visitors Expenditure by Products and Category of Visit - (Sample unweighted), 2022

### Visitors Expenditure by Products and Category of Visit

The following products and services were consumed by both overnight and same-day inbound visitors in Namibia in 2022. The estimated total sample was computed using the sample proportion while the total expenditure was derived by multiplying total arrivals by the average expenditure. The expenditure on these products and services was grouped to fit the TSA Table 1 format for the inbound tourism expenditure. After grouping the products adjustments were made (see Documentation for TSA Table 1). Also, the proportion for the same was computed.

Table: 1J: Expenditure by Products and Category of Visit - (Sample unweighted), 2022

# Appendix 2

## APPENDIX 2: DOMESTIC TOURISM

### Introduction

Data from the Namibia Domestic Tourism Expenditure Survey report (NDTES, 2015) as published by the Namibia Tourism Board was used as a main source of data to establish the domestic tourism expenditure in 2022. Total Expenditure based on the NDTES 2015 report stood at N\$6.3 billion, with N\$2.0 billion attributed to same-day visitors while N\$4.3 billion associated with overnight visitors' expenditures.

### Estimation of expenditure figures from 2015 to 2022

In order to determine 2022 expenditures, a percentage distribution based on average spending was used across the 12 tourism product categories. The average spending per type of tourism products category was obtained from the 2015 Domestic Tourism Expenditure Survey report published by the Namibia Tourism Board.

Formula used to obtain proportional expenditure distribution

$(\text{Average spending for each category} \div \text{total average spending for specific trip type}) \times 100$

*Table 2A: Proportional expenditure distribution: same day visitors*

Tourism Expenditure Category	Average N\$	Proportion (%)
Accommodation	5.90	0.6
Food and Drink	177.90	17.9
RoadTransport	254.30	25.6
Air Transport	15.00	1.5
Recreation/Entertainment	20.00	2.0
Cultural Services	0.30	0.0
Game Parks	2.00	0.2
Second Home Repairs/Maintenanc	2.90	0.3
Gifts	27.10	2.7
Clothes	91.90	9.3
Luggage	2.40	0.2
Other Shopping	239.80	24.1
Medical	29.00	2.9
Travel Insurance	0.90	0.1
Home Security	1.20	0.1
Social Events	19.30	1.9
Business	103.10	10.4
<b>Total</b>	<b>993</b>	<b>100.0</b>

*Table 2B: Proportional expenditure distribution: overnight visitors*

<b>Tourism Expenditure Category</b>	<b>Average N\$</b>	<b>Proportion (%)</b>
Accommodation	26.00	11.8
Food and Drink	41.30	18.8
RoadTransport	58.60	26.6
Air Transport	1.70	0.8
Recreation/Entertainment	8.40	3.8
Cultural Services	0.50	0.2
Game Parks	0.70	0.3
Second Home Repairs/Maintenance	6.30	2.9
Gifts	8.80	4.0
Clothes	17.10	7.8
Luggage	0.80	0.4
Other Shopping	41.70	19.0
Medical	1.90	0.9
Travel Insurance	-	-
Home Security	0.40	0.2
Social Events	2.20	1.0
Business	3.60	1.6
<b>Total</b>	<b>220.00</b>	<b>100.0</b>

To obtain the actual total expenditure for each trip type and by specific category, the proportions obtained above are multiplied by the respective expenditure of each category.

**Formula for calculating actual total expenditure per category:**

(Average expenditure for a specific type of trip category ÷ total average expenditure for a specific type of trip) x total expenditure for a specific type of trip in 2015

**Note:** Total expenditure for same-day trips in 2015 from NTB Domestic survey report = N\$ 2.04 billion

Total expenditure for overnight trips in 2015 from NTB Domestic survey report = N\$ 4.26 billion

*Table 2C: Total expenditure for same day visitors - N\$ (weighted), 2015*

## Extrapolation of 2015 to 2022 Domestic Tourism Expenditure (Weighted)

Specific indicators were carefully chosen and presented below, along with their corresponding tourism product categories. These indicators reflect the performance of the respective sectors at current prices as obtained from the National Accounts. To extrapolate 2015 expenditure for each category to 2022, value added growth rates for different indicators (as obtained from National Accounts) at current prices were used. Current prices refer to the market value or nominal price of a good, service, or asset at a specific moment in time, without accounting for inflation or changes in purchasing power.

**Table 2E: Type of category and indicators used for extrapolation**

Categories	Sectors' Growth rates
Number of trips	Private Final Consumption Expenditure
Accommodation	Hotels
Food and Drink	Restaurants
RoadTransport	Transport by road, passengers
Air Transport	Air transport
Recreation/Entertainment	Art and entertainment
Cultural Services	Art and entertainment
Game Parks	Art and entertainment
Second Home Repairs/Maintenance	Goods and services for routine household maintenance
Gifts	Wholesale and Retail
Clothes	Wholesale and Retail
Luggage	Wholesale and Retail
Other Shopping	Wholesale and Retail
Medical	Insurance and Pension
Travel Insurance	Insurance and Pension
Home Security	Professional, Scientific services
Social Events	Art and entertainment
Business	Straight average CPI

# Appendix 3

## APPENDIX 3: OUTBOUND TOURISM

### Introduction

TSA Table 3 presents the outbound tourism consumption in 2021. The table captures visitor's expenditure by-products and category of visit.

### Estimating day visitor numbers and tourist numbers

The outbound tourism data in this report was obtained from the 2022 Outbound Tourism Survey. The Data shows the weighted number of outbound visitors by mode of travel and purpose of visit. The data shows that the majority of outbound visitors travelled by road, making up 166,445 of the total outbound visitors.

*Table 3A: Total number of visitors by purpose of visitors by mode of travel – weighted, 2021*

Mode of Travel	Purpose of Travelling Abroad				Total No. Visitors
	Visiting friends and relatives	Business/Professional	Holiday/Leisure/Recreation	Others	
Air	13,523	52,509	25,175	14,098	105,305
Road	52,796	41,144	38,123	34,382	166,445
<b>Total</b>	<b>66,319</b>	<b>93,653</b>	<b>63,298</b>	<b>48480</b>	<b>271,750</b>

### Average and total spent by same-day visitors (excursionists)

The table below shows the average and total spending by type of visitors. The data shows that the majority of the total outbound expenditure was spent by the overnight outbound visitors. The Average outbound expenditure of an overnight visitor is N\$ 9,573.72 while the average outbound expenditure of the same day visitor is N\$ 3,764.26.

*Table 3B: Average and total spent by day visitors – weighted, 2021*

Type outbound visitor	Total number of travelers returning	Weighted Population	Average Outbound Expenditure	Outbound Expenditure
Same Day Visitors	97	13,954	3,764	52,527,850
Overnight Visitors	1,792	257,796	9,888	2,549,134,866

## APPENDIX 4: TOURISM SUPPLY

The main source of data used in compiling TSA Table 5 was the System of National Accounts (output, intermediate consumption, value added).

### *Assumption:*

- **Intermediate Consumption (IC) for retail trade was calculated by:**

*IC for wholesale, retail, and trade X ratio of output for hotels and restaurants to total output of the economy.*

Tourism supply shows industries that produce tourism consumption products available for internal demand. It encompasses the supply-side of the Tourism Satellite Account (TSA). The information on the supply-side is obtained from national accounts for the year 2022.

National accounts give information on output, intermediate consumption, and gross value added. The output is broken down by product and is valued at basic prices, and the intermediate consumption (inputs) valued at purchasers' prices. The difference between these two values is the Gross Value Added (GVA) at basic prices.

The production accounts show the output at basic prices, intermediate consumption and Value Added for each tourism specific industry. The values are computed based on the System of National Accounts (SNA) 2008.

Industries are classified according to International Standard of Industrial Classification (ISIC) revision 4 while products are classified using the Central Product Classification, revision 2. However, tourism does not form a separate industry in the ISIC consequently, tourism industries and products are highlighted and extracted using the Tourism Satellite Account: Recommended Methodological Framework 2008.

## APPENDIX 5: ESTIMATION OF BASIC PRICES AND VALUE ADDITION, 2022

### Calculation of Direct Tourism Gross Value Added (DTGVA)

1. Identify the products in the economy purchased by visitors.
2. Derive an estimate of internal tourism consumption for each tourism product.
3. Remove product taxes and subsidies, margins and imports from internal tourism consumption of each product at purchasers' prices to derive internal tourism consumption at basic prices this represents the domestic output consumed by visitors.
4. Determine the proportion of domestic output of each product consumed by visitors by dividing tourism consumption at basic prices into the total output of each product at basic prices.
5. For each tourism product, identify the industries that have a direct relationship with visitors. In the case of goods, only include industries that provide retail trade services. In the case of other margins (wholesale and transport margins), all industries are deemed not to have direct relationship with visitors.
6. Apply tourism ratio to the output of each product for those industries that have a direct relationship with visitors to derive the direct tourism output of each industry.
7. Estimate the intermediate consumption required to produce each industry's output of tourism products using relationships in National accounts. The default assumption is that there is a constant ratio of output to intermediate consumption for both tourism and non-tourism products produced by an industry.
8. Calculate direct tourism Gross Value Added at basic prices for each industry as direct tourism output less the intermediate consumption required to produce the direct tourism output, and sum for all industries in the economy. Direct tourism gross value added at basic prices is directly comparable to the value added for all other industries.

**Table 5A: Internal tourism Consumption at Basic Prices N\$-Million**

## APPENDIX 6: EXTENSION TO BASIC TSA

### EMPLOYMENT IN TOURISM INDUSTRIES

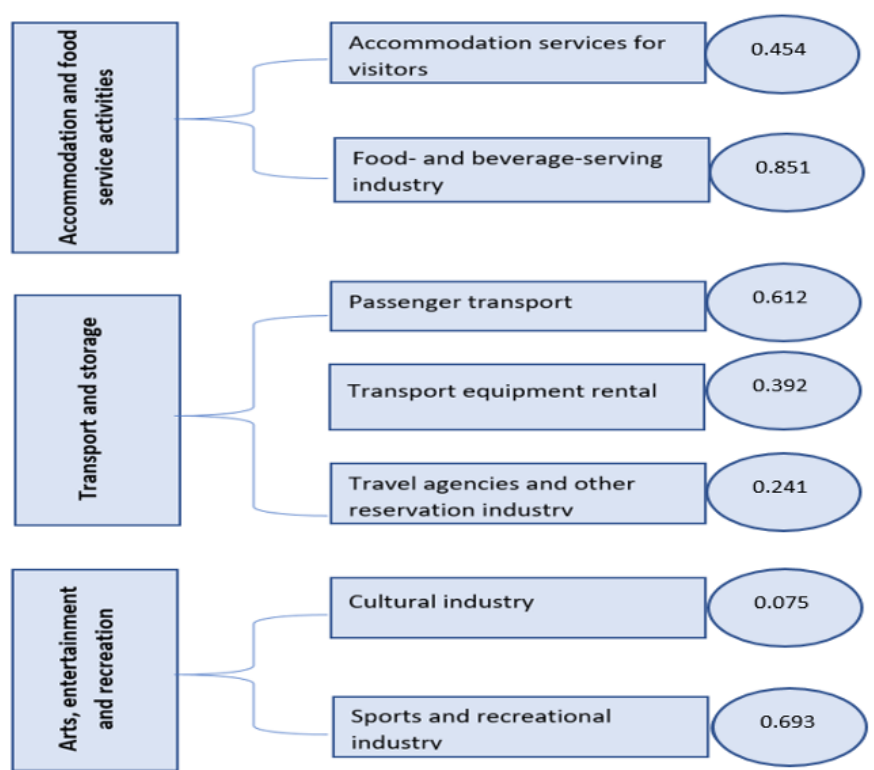

#### Tourism related industries' employment levels

The 2018 Labour Force Survey classified industries according to the International Standard Industrial Classification of All Economic Activities (ISIC). Therefore, tourism related industries are not classified explicitly. The ISIC industries related to tourism were identified as:

1. Accommodation and food service activities,
2. Transport and storage and
3. Arts, entertainment and recreation.

The ISIC industries related to tourism were then disaggregated into tourism related industries and tourism ratios were applied as recommended by TSA-RMF 2000/2008 to estimate for employment, number of establishments, and earnings.

The tourism related industries with their respective ratios were grouped as follows:

## Calculations:

Output from Table 5 for tourism related industries were aggregated to determine the proportion of each tourism industry in their respective ISIC categories.

The proportions are then multiplied with the figures in the ISIC industries to determine the employment and establishments related to tourism.

To compute for the direct contribution attributable to tourism, the value computed in (2) are multiplied directly with the tourism ratios.

**Table 6A: Proportion of employment by economic activity, size of establishment and status in employment**

Tourism related industry	Number						Percentage	Percentage				
	Employees	Employers	Own account worker	Contributing family worker	Workers not classified by status	Total		Employees	Employers	Own account worker	Contributing family worker	Workers not classified by status

CS Collective Services

IS Individual Services

... No data available

**Source:** Ministry of Finance & Public Enterprises: Actual Expenditure for 2021/2022 FY

### Assumptions and estimations

#### ◇ Percentage of Actual Expenditure directly contribute to Tourism is estimated on the following:

The activity below is managed by the Ministry of Defence, the assumption of 60 percent directly linked to tourism and 40 percent non-tourism, because the protection services provided and collectively consumed by both residents and tourists hence the equal percentage estimate.

#### ◇ Protection of the Maritime Coastline: 40 percent

The activity below is managed by the Ministry of Fisheries and Marine Resources, with the assumption that 60 percent directly linked to tourism and 40 percent non-tourism, because the operation and surveillance services are provided and collectively consumed by both residents and tourists hence the equal percentage estimate.

#### ◇ Operations and Surveillance: 40 percent

The below activity is managed by the Ministry of Education, Arts and Culture, to promote creative talents and create employment that benefit the Namibian residents and few percentages (estimate of 30 percent) that tourists come to experience.

◇ **Arts Services: 30 percent**

The below activity is managed by the Ministry of Education, Arts and Culture. It promotes the spiritual culture and heritage of the National pride and promotes cultural festivals which both residents, local tourists and international tourists collectively consume.

◇ **National Heritage and Culture: 50 percent**

The activities below are under the Ministry of Environment, Forestry and Tourism and most activities promote the tourism industry as well as the main operations benefiting tourism. After considering the budget allocation to the Ministry, the following tourism proportions were calculated for the respective activities.

◇ **Policy Co-ordination: 50 percent**

Apart from the Directorate of Tourism and Gaming whose main mandate is Tourism development, other Directorates have very little focus on tourism. More emphasis is put on tourism development in the Trans frontier National Parks such as KAZA, IONA, AND AI-AIS RICHTERSVELD, while the Directorate of Scientific Services has a policy in place for concessions on state land.

◇ **Coordination and support services: 50 percent**

◇ **Parks and Wildlife Management: 10 percent**

◇ **Natural Resources Management: 20 percent**

CBNRM as it relates to tourism development, include Joint Venture trainings, Joint Venture negotiations and Conservancy capacity building. Most expenditure incurred is on Subsistence and travel and venues for meetings.

◇ **Infrastructure Development and Maintenance: 30 percent**

With a total budget of around N\$356,308,494 less than N\$6,722,370 is used to upgrade roads and build new roads.

◇ **Regulation of Environment Protection and Sustainable Resource Management: 20 percent**

Tourism Concessions form part of the sustainable resource management under the Directorate of Scientific Services. Concession implementation expenditure usually includes subsistence and travel, venues and material cost to conduct meetings, advertisements and selection process, while actual Concessions are run by external investments.

The below activity is directly contributing to Tourism by the nature of the activity, under the Ministry of Home Affairs, Immigration, Safety and Security.

◇ **Issuance of Visa, Permits, Passport and Citizenship: 100 percent**

The last activity is mostly linked to tourism as tourist's use the ports for entry and exit, however there are other activities taking place of non-tourism activities such as imports and exports, refugees, immigrants etc. So, assuming 70 percent contributes to tourism.

◇ **Establishment and Regulation of Ports of Entry and Exit: 70 percent**

**Table 8B: COFOG Classifications**

No.	Category	Code	Name	Objective and Description	Main Operation
1	<b>Military Defense (CS)</b>	70210	Protection of the Maritime Coastline	In crisis or war, the Maritime Wing has the principle responsibility to defend Namibia's Maritime domain and coastline against attacks. It will train and operate remotely as part of an offshore protection force to develop capability.	The Maritime Wing would augment civil offshore patrol forces.
